### A plea to AIDS researchers

Your article "AIDS research, virus both advance" (SN: 1/5/85, p. 7) prompts this plea: that researchers not play the diligent scientist and withhold ribavirin from any AIDS patient for the sake of caution or the statistical control of a double-blind test. The disease is lethal, the drug is known to be quite safe, and a large group of survivors could perhaps supply antibodies for a stopgap passive-immunity serum until an active vaccine can be developed. It is not, as stated, "a long way from a cell culture to a human body." Surely any AIDS-afflicted human body would gladly oblige by standing right next to any cell culture if this would make it easier for the medical person to administer the drug.

The so-called "risk factors" are primarily a phenomenon of group sharing, not a group susceptibility nor a group divine punishment. The disease will disperse until being human will be a risk factor. I, for one, would excuse, even

**Science Service** Institution for the public understanding of science founded 1921; a nonprofit corporation.

**Board of Trustees**—President, Glenn T. Seaborg; Vice President, Gerald F. Tape; Treasurer, Willis Harlow Shapley; Secretary, Julius Duscha; Joseph W. Berg Jr.; Edward Bliss Jr.; Bowen C. Dees; David A. Goslin; Milton Harris; Hilleary F. Hoskinson; O. W. Riegel; H. Guyford Stever; John Troan; Deborah P. Wolfe.

Director: E. G. Sherburne Jr.; Assistant Director: Dorothy Schriver; Business Manager: Donald R. Harless.

## Thoughts on the unthinkable

"More support for nuclear winter theory" (SN: 12/22 & 29/84, p. 397) left me thoughtful:

*Do the lemmings, I wonder,  
on their way to the sea,  
Dispute upon the process of drowning  
and the sea's salinity?*

Perhaps if the National Academy of Sciences were less fascinated by "the process of drowning" and more with the process of living, it would be urging the study of ways to prevent a nuclear winter in the same spirit of goodwill with which it now seeks to understand the unthinkable.

Michael L. Wright  
Tallahassee, Fla.

*Correction: In the article "Catching Some Zs" (SN: 1/19/85) a misprint in the ninth line from the bottom of the middle column put "neutrons" for "neutrinos." The correct sentence should read: "(Muons, electrons and neutrinos are not hadrons.) In the same column, "U<sub>235</sub>" should read "uranium."*

applaud, a lapse in scientific meticulousness if it could postpone the day when my humanness becomes a risk factor.

Mark Rath  
Hyde Park, N.Y.

## On jumpers and thumpers

When the California researchers said of frog seismic signaling ("Frog talk: Chirp, chuckle and thump," SN: 1/12/85, p. 21), "[This] provides the first strong implication of the use of substrate-borne seismic signals in intraspecific communication in vertebrates," I suppose they had forgotten about bunnies. Every schoolchild knows of "Thumper."

Marvin E. Kahn  
Germantown, Md.

*In the case of Thumper and other ground-thumping mammals, biologists think that it is the thump's airborne sound, rather than the ground-borne seismic waves, that carries the signal from one animal to another.* — J.A. Miller
