The Intuitive Edge

Understanding and Developing Intuition

By Philip Goldberg

For centuries, the predominant approach to decision making and problem solving has emphasized logic and deductive reasoning. In an increasingly complex, demanding, and surprise-filled world, it is essential to utilize other ways of knowing to gain an "edge" in everything we do. Philip Goldberg shows how to recognize and take full advantage of our natural — but traditionally elusive — intuitive powers. Goldberg's model of how the intuitive mind works balances provocative theories and hard facts. He includes the latest brain research findings and pioneering laboratory work conducted in the fields of behavior, creativity, and consciousness.

INTUITION

Tarcher, 1983, 241 pages, 9¼" x 6¼", hardcover (\$14.45), paper (\$7.70).

Science News Book Order Service, 1719 N Street N.W., Washington, D.C. 20036

Please send _____ copy(ies) of **The Intuitive Edge**. I include a check payable to Science News Book Order Service for \$14.45 (or \$7.70) plus \$1.00 handling (total \$15.45, \$8.70) for each copy.

Man Suddenly Sees to the Edge of the Universe

Richard Casement

When Richard Casement created the "Science and Technology" section in *The Economist* he started something new in economic and current-affairs journalism. By revealing new and interesting developments in science and technology in a way that was easily understood by the traditionally (but not scientifically) educated, he began a trend that has been incorporated into many serious journals and newspapers ever since.

Open Court, 1984,
204 pages,
8¾" x 5½", hardcover, \$12.95

In *Man Suddenly Sees to the Edge of the Universe*, some of Casement's many works from *The Economist* have been collected and edited by his colleagues; the clips speak for themselves of his gift for simplicity and his grasp of complexity.

"... looks behind the white-coated image of objective science... the result is to demystify science and, at the same time, to reassure us that the scientific process, though imperfect, works remarkably well."

—John Noble Wilford, science correspondent,
The New York Times
