

Always / Wanted to Fly the Space Shuttle?

An authentic, authoritative guide for would-be pilots and passengers.

Everyone recognizes the enormous technical achievements of the Shuttle, but few people understand how it operates. Now that information gap has been filled by this unique and fascinating paperback.

The Space Shuttle Operator's Manual is written in clear, simple language by experts in the field. It is abundantly illustrated with line drawings, maps, and photographs.

The Manual is divided into six sections:

From Earth to Orbit — step-by-step instructions for launch and ascent, linked to a 4-color gatefold reproduction of the Shuttle's instrument panel, as well as typical radio exchanges between pilot and ground control.

Living in Space — what to wear and how to get dressed, how to eat, sleep, drink and stand, personal hygiene, and gravity.

Working in Space — how to operate each part of the machine (the remote manipulator arm, the space telescope, etc.).

Emergency Procedures — launch aborts, inflight vehicle plights, and medical and technical emergencies.

Entry and Landing Procedures — preparations for return and a descent checklist.

Space Shuttle missions — listing all of the Shuttle's capabilities, including Satellite Repair, Communications Satellite Deployment, Spacelab, and many more.

And also 40 pages of appendices giving complete structural specifications of the craft and its systems, a glossary of NASA terms and acronyms, and a plan of the Kennedy Space Center.

Noble Thesaurus of Physics

Edited by Dr. R.C. Denney and Stephen Foster

Also available:

Barnes & Noble Thesaurus of . . .

Biology, Anne C. Gutteridge. 2,700 words used in biology. 237 pages, 7¼" x 4½", profusely illustrated, paperback, \$6.95.

Chemistry, Arthur Godman. The fundamentals of chemistry explained and illustrated with 1,500 words used in chemistry. 256 pages, 71/4" x 41/6", profusely illustrated, paperback, \$6.95.

Geology, Alec Watt. The principles of geology explained and illustrated using 1,500 words from geology. 192 pages, 71/4" x 41/6", profusely illustrated, paperback, \$6.95.

Science, Arthur Godman. Covers all fields of scientific language using 1,500 words from physics, chemistry and biology. 256 pages, 71/4" x 41/6", profusely illustrated, paperback, \$6.95. 1,700 words pertaining to physics are indexed alphabetically and grouped by subject. Words are defined, and associated words are referenced. Useful for students and professionals.

checked below. I include a check	of each Barnes & Noble Thesaurus is payable to Science News Book Order andling (total \$7.95) for each copy.

LEAVES

Three hundred full-color pictures make up this book of leaves from around the world, photographed by Kjell Sandved of the Smithsonian Institution in Washington, D.C. The accompanying text, written by Dr. Ghillean Prance of the New York Botanical Garden, includes many leaf subjects such as structure and shapes; leaves as homes; leaf margins; variegated, floating and succulent leaves; and poisonous and prickly leaves that defend their plants.

Crown. 1985. 244 pages. 10"x 10". hardcover. \$35.00
