Urban Wildlife: Out on the Town

In the first full-scale history of cognitive science renowned cognitive psychologist and author Howard Gardner chronicles a new and crucial scientific chapter in the perennial quest to understand the mind. An exciting interdisciplinary effort, cognitive science seeks to solve the classic problems of Western thought: the nature of knowledge and how it is represented in the mind.

Howard Gardner traces the relevant history of the constituent cognitive sciences — philosophy, psychology, artificial intelligence, linguistics and the border disciplines of anthropology and neuroscience — demonstrating their parallel and converging developments.

Then, drawing on interviews with leading cognitive scientists, Gardner illustrates the full flowering of the field through major current work on visual processing, mental imagery, classification and rationality.

Basic Books, 1985, 423 pages, 9 1/2" x 6 1/2",
hardcover, \$22.50

Science News Book Order Service

1719 N Street, NW, Washington, DC 20036

Please send _____ copy(ies) of **The Mind's New Science**. I include a check payable to Science News Book Order Service for \$22.50 plus \$1.00 handling (total \$23.50) for each copy. Domestic orders only.
