MATH AND LOGIC GAMES

by FRANCO GOSTIN

A collection of games and puzzles to enjoy while increasing your knowledge and understanding of mathematics and logic.

- Games of probability
- Paradoxes and Antinomies
  - Games with geometric figures
  - Number games

Harper & Row, 1983, 181 pages, 8½" x 10", paperback, $10.95

Science News Book Order Service
1719 N St., NW, Washington, DC 20036

Please send copy(ies) of Math and Logic Games. I include a check payable to Science News Book Order Service for $10.95 plus $1.00 handling (total $11.95) for each copy. Domestic orders only.

Science Goes to the Dogs

By S. Harris

A new science cartoon book from the author of What's So Funny About Science?, Chicken Soup and Other Medical Matters and others. "...be prepared to laugh joyously at Sidney Harris's peculiar and special sense of fun." —from the foreword by Isaac Asimov

ISI Press, 1985, 114 pages, 8" x 8", softcover, $7.95

Collect Authentic Dinosaur Models

from the British Museum of Natural History

These are not toys.

You are looking at four authentic dinosaur models designed by the curators of the British Museum of Natural History. Each was sculptured to scale (4:5) by the craftsmen of the Museum duplicating the original down to the skin texture! They have been beautifully reproduced in solid, unbreakable, self-colored plastic in sizes as large as 1½" inches. Thousands of these fascinating and educational, life-like models have been sold by Museums throughout the world. We are proud to offer them to collectors for the first time through this advertisement.

Set includes Diplodocus, 19½", Triceratops, 10", Brontosaurus, 6", Stegosaurus, 5½", $44.95 for all four, including a detailed description and history of each. Sold with an uncondemned 30 day money-back guarantee.

Barnes & Noble Booksellers

109413

Please rush my dinosaur set(s) for $44.95 each. Plus $1.00 shipping & insurance. NY & NY residents please add sales tax. 30-Day Money-Back Guarantee.

Renowned theoretical physicist, Richard Feynman, here presents the forbiddingly named theory of quantum electrodynamics for the general public with the clarity, accuracy, and completeness that have made his lectures famous.

He begins with a discussion on the reflection of monochromatic light, followed by one on electrons and their interactions. Finally we see how the theory of quantum electrodynamics helps us understand quarks, gluons and other major terms of current physics; he also discusses the relation of quantum electrodynamics to the rest of physics.

“The theory of quantum electrodynamics describes Nature as absurd from the point of view of common sense. And it agrees fully with experiment. So I hope you can accept Nature as She is — absurd.” — From the book

Assuming little scientific background of his readers, Feynman describes the interaction of light and electrons which underlies almost everything we observe in the physical world.

Princeton University Press, 1986, 158 pages, hardcover, $18.50
TIME’S ARROWS
Scientific Attitudes Toward Time
By Richard Morris

An overview, in twelve chapters, of the major attitudes toward time that have informed Western thought:

1. What Is Time?
2. Cyclical Time and Linear Time
3. Abstract Time
4. Calculus and the Idea of Determinism
5. The Discovery of the Past and the Idea of Progress
6. The Age of the World
7. Entropy and the Direction of Time
8. The First Arrows of Time
9. Relativistic Time
10. Cosmic Time
11. The Beginning and End of Time
12. What Is Time?

“Here, for the first time, is a scientifically accurate, yet engaging account of the mystery of time asymmetry, written for the non-specialist. Morris skillfully explains the essential puzzles and paradoxes of time’s enigmatic arrows, and intrigues the reader with a survey of the latest research ideas aimed at solving what is surely one of the major outstanding problems of physical science.”

— Dr. Paul Davies, author of The Edge of Infinity and Space and Time in the Modern Universe

Simon & Schuster, 1985
240 pages, 8 1/2” x 5 1/2”, paperback, $8.95
