
ATTENTION ADVENTURE-SEEKERS

HOW TO SHOOT AN AMATEUR NATURALIST By Gerald Durrell

The trials, traumas, frustrations and futilities of filming a natural history television series are engagingly recounted by Durrell as he experienced them during the making of his most recent BBC series, "The Amateur Naturalist."

Whether surrounded by the English countryside, the Sonoran desert or the Ionian sea, Durrell always finds rare and wonderful examples of flora and fauna, as well as his share of adventure—he scales a sea cliff to film gannets and skuas gliding on air currents, deftly sidesteps a herd of charging bulls and experiments with a peanut-butter lure for a pair of obstinately shy badgers. TO MOCK A MOCKINGBIRD By Raymond Smullyan

In the first part of the book, Smullyan transports us once again to that wonderful realm where knights, knaves, twin sisters, quadruplets, brothers, gods, demons and mortals either always tell the truth or always lie, and where truth-seekers are set a variety of fascinating problems.

In the second and larger section, we accompany the Inspector on a summer-long adventure into the field of combinatory logic (a branch of logic that plays an important role in computer science and artificial intelligence). His adventure, which includes enchanted forests, talking birds, bird sociologists and a classic quest, provides for us along the way the pleasure of solving puzzles of increasing complexity until we reach the Master Forest and — thanks to Godel's famous theorem — the final revelation. The Man Who Mistook His Wife for a Hat (and other clinical tales)

By Oliver Sacks

A neurologist who writes with wit and zest, Sacks will fascinate you with stories of patients like the man in the title — a professor who couldn't recognize faces and who patted the tops of fire hydrants, believing them to be children. Sacks is no ordinary practitioner; his patients suffer from rare complaints like Korshakov's syndrome, Tourette's and other afflictions, some of which make the patient unsure of the reality of his or her own body. Their tragedies and their courage are joined with the author's astute professionalism and humanity to make for a riveting foray into the unknown. This book ranks with the very best of its genre. It will inform and entertain anyone, especially those who find medicine an intriguing and mysterious art.
