*This quite remarkable book introduces the pond and its inhabitants in over 400 superb color photographs, accompanied by text and captions that describe the natural history of the pond's organisms and, together with the illustrations, allow identification to family or genus. There is an introduction to the ecology of ponds in general, lists of taxonomic orders, and a color key to all the plants and creatures featured, as well as advice on how to collect and study pond life.*

**“The thing that we most underestimated ten years ago was the enormous potential that this new technology has for developing an entirely new industry, that of biotechnology.”**

“... an excellent summary of trends in this industry with material of interest to scientist, engineer, economist and legislator. The reader will be peering into the future.”

*Alexander Rich  
William Thompson Sedgwick Professor  
of Biophysics  
Department of Biology  
Massachusetts Institute of Technology*

“This well-written and readable book covers the state of the art of biotechnology from both scientific and commercial standpoints. I heartily commend it to anyone — whether scientist, corporate official, lawyer, journalist, or student — who has an interest in this promising new industry.”

*Richard J. Mahoney  
President and Chief Executive Officer  
Monsanto Company*
