

By John R. Pierce

In this book on acoustics for the nonspecialist, John R. Pierce takes us on an exploration of scientific research into music, from the classic investigations of Pythagoras to the current fieldwork and experiments by eminent acousticians, psychologists and composers. Readers of *The Science of Musical Sound* will take away with them a new awareness of how rational inquiry into music can open up new realms of musical enjoyment. Examples of electronic and computer-generated sounds are included on the two 33 $\frac{1}{3}$ rpm records that accompany the book.

Scientific American
Books, 1984, 242 pages,
9 $\frac{1}{2}$ " x 8 $\frac{3}{4}$ ", hardcover,
\$27.95, plus two 33 $\frac{1}{3}$ rpm
records.

THE THIRD MILLENNIUM

A HISTORY OF THE WORLD: A.D. 2000-3000

Brian Stableford and David Langford

Cast in the form of a narrative written in the year A.D. 3000, it looks back through the centuries to the present. We are the ancestors; our future is the historian's past. Systematic, completely plausible and above all realistic, this book is less science fiction than a serious attempt to document events that have not yet occurred: the last nuclear war (2079, between Argentina and Brazil, resulting in the permanent destruction of Buenos Aires and a worldwide ban on nuclear weapons) . . . the greenhouse crisis, in which seas rose and devastating floods hit coastal cities (2015-2120) . . . the volcanic destruction of Japan in 2085, after which Japanese refugees spread over the world in a new diaspora, carrying their knowledge of technology and clinging to their traditions . . . the "greening" of the moon and other hitherto barren outer space places . . . the development of self-contained microworlds in the 23rd Century . . . the emergence of aggregated households and new forms of sex in the 28th Century . . . and much more.

Vital Lies, Simple Truths

The Psychology of Self-Deception

Daniel Goleman

Everything the mind perceives is sorted, filtered and censored by the unconscious before it reaches awareness, and as much as 99 percent is never even registered. Our blind spots block these perceptions and in so doing offer us a sense of security, but at a psychological cost. The mind actively shields itself from anxiety by twisting attention away from painful truths. Thus, in an effort to avoid anxiety, the unconscious censors information, whether it be perceptions of the moment or distant memories. The result of this filtering is a soothing self-deception which diminishes anxiety — but the price to be paid is a blunted experience of life.

Goleman draws upon a wide variety of evidence from brain function to social dynamics to reveal the ways in which we skew crucial aspects of our lives, of our most intimate relationships and of our common reality.

Simon & Schuster, 1985,
287 pages, 9½" x 6½",
hardcover, \$17.95

"The range of what we think and do is limited by what we fail to notice. And because we fail to notice *that* we fail to notice there is little we can do to change until we notice how failing to notice shapes our thoughts and deeds"
—R. D. Laing
