Books is an editorial service for readers' information. To order any book listed or any U.S. book in print please remit retail price, plus \$1.00 handling charge for each book, to **Book Order Service**, Science News, 1719 N Street, N.W., Washington, D.C. 20036. All books sent postpaid. Domestic orders only.

The Captured Womb: A History of the Medical Care of Pregnant Women — Ann Oakley. The history of the care pregnant women receive in preparation for childbirth and motherhood. Examines how and why, and what consequences resulted from the incorporation of pregnancy in the medical domain. Originally published in hardback in 1984. Basil Blackwell, 1986, 352 p., illus., paper, \$9.95.

Creativity: Genius and Other Myths — Robert Weisberg. The author feels that much of what we believe about creativity is not based on hard data but is more or less folklore, passed down from one generation to the next as if it were truth. He presents a framework for understanding creativity based on experimental results. WH Freeman, 1986, 169 p., illus., \$21.95, paper, \$9.95.

Filters Against Folly: How to Survive Despite Economists, Ecologists, and the Merely Eloquent — Garrett Hardin. This outstanding biologist proposes three intellectual "filters" to enable the general reader to assess the rhetoric of the experts. Goes on to examine several conflicts of ecologists and economists, such as the unattainable ideal of zero pollution, the distribution of income and wealth and the question of poverty and how much compassion society can afford. Originally published in hardback by Viking Press. Penguin, 1986, 240 p., \$6.95.

A Natural History of Sex: The Ecology and Evolution of Sexual Behavior — Adrian Forsyth. This collection of 17 essays explores the role of sex and courtship in a wide range of living things, from fruit flies and black widow spiders to bluebirds, opossums and human beings. Describes the diverse sexual behavior found in the natural world and discusses such phenomena as promiscuity, incest taboos, pornography and mate selection. Scribner, 1986, 190 p., \$16.95.

The Pleasures of Watching Birds — Lola Oberman. Birding, says the foreword, is for the young at heart — those who would enjoy the out-of-doors, those eager for new experiences, for widening horizons and new friendships. Many birders become proficient enough to participate in projects that add to our knowledge of birds. Through delightful essays this book reveals various aspects of birding, such as the many ways you can enjoy birds in and around your home, how you can meet other birders, how you can become involved in group activities and how you can get help with your identification problems. The text is enhanced with beautiful line drawings by Joy Swan. P-H Pr, 1986, 256 p., illus., \$17.95.

Time Frames: The Rethinking of Darwinian Evolution and the Theory of Punctuated Equilibria — Niles Eldredge. "That evolution occurs no biologist worthy of the name doubts," says the author, "[b]ut many biologists these days do openly wonder how complete and accurate our grasp of the mechanics of the evolutionary process really is." This is the story of punctuated equilibria — what the theory is, how it came to be and what the author thinks it means to modern evolutionary thinking. Originally published in hardback in 1985. S&S, 1986, 240 p., illus., \$8.95.

AUTOMATE ^{NEW} MEASUREMENT ON YOUR IBM PC

Photo Courtesy/Edward Jones, M.D.

New digitizing tablet with Sigma-Scan™ measurement software. \$1195

Cat #3011 — 12" x 12" system

Resolution of .025 mm, accuracy of at least .25 mm. Comes with state-of-the-art software for area, linear, perimeter, length of curvy line, and angular measurements. X, Y point or stream digitizing. Descriptive statistics. Transfer data to other programs in standard ASCII or DIF format.

This and other new Microcomputer Tools for the Scientist. Call or write today for FREE catalog.

NATUREWATCH

Exploring Nature With Your Children

By **Adrienne Katz**

Now you and your children needn't take to the wilds to appreciate the natural world. Whether you live in a country cottage or a high-rise apartment, **NATUREWATCH** offers your family dozens of ways to explore and learn from your natural environment. The more than 50 fun and easy-to-do projects in **NATUREWATCH** require no special equipment or fancy skills. With a little help from their parents, children will be able to tell the age of a tree, how to trace the route of water in the veins of a leaf and how to catch a spider's web intact. After learning to identify certain plants and the insects that depend on them, your child will be ready to create a garden of his or her own — indoors or outdoors — and study the fascinating lives of its inhabitants. A special section of nature crafts shows how to create lasting treasures from materials found in nature, from seed jewelry to tie-dyeing.

Science News Books 1719 N Street, NW, Washington, DC 20036

Please send _____ copy(ies) of **NATUREWATCH**. I include a check payable to Science News Book Order Service for \$7.95 plus \$1.00 handling (total \$8.95) for each copy. Domestic orders only.
