

Books

Books is an editorial service for readers' information. To order any book listed or any U.S. book in print please remit retail price, plus \$1.00 handling charge for each book, to **Science News Books**, 1719 N Street, NW, Washington, DC 20036. All books sent postpaid. Domestic orders only.

Annual Review of Psychology, Vol. 38 — Mark R. Rosenzweig and Lyman W. Porter, Eds. The prefatory chapter for this volume is by Hans Wallach and the "timely topics" cover women's contributions to psychology, an analysis of the dynamic self-concept and a review of the work in the emerging field of political psychology. *Annual Reviews*, 1987, 776 p., illus., \$31.

Arctic Dreams: Imagination and Desire in a Northern Landscape — Barry Lopez. Explores the history of this vast frozen land and the people who have been drawn to it. Examines the Arctic as it is today and makes recommendations for its future use. A 1986 American Book Award winner, which was originally published in hardback by Scribner in 1986. Bantam, 1987, 417 p., maps, paper, \$4.95.

Beyond Einstein: The Cosmic Quest for the Theory of the Universe — Michio Kaku and Jennifer Trainer. A readable book for the non-physicist on the new theory called "superstring." Although the details of the theory are still being worked out, the authors say it appears to be the best current candidate for the unified field theory. They provide a broad glimpse of the world of physics, presenting the superstring theory in the context of the last 300 years of science. Bantam, 1987, 225 p., paper, \$9.95.

The Care and Feeding of Ideas: A Guide to Encouraging Creativity — James L. Adams. A guide to creating an environment in which ideas can thrive. Explains the mechanics of creativity by taking the reader on a tour of the mind, looking at areas such as brain chemistry, memory, the senses and personality. Examines the environmental factors that provide the fertile ground for creative ideas — for example, a good reward system, time to play, access to resources and an openness to change. Quizzes and exercises designed to strengthen the reader's problem-solving capabilities are interspersed throughout the book. Addison-Wesley, 1986, 223 p., illus., paper, \$8.95.

Computers and Computing Information Resources Directory — Martin Connors, Ed. A comprehensive guide to approximately 6,000 sources of information on general and specific applications of computers and data processing. Provides eight major categories of information sources: trade and professional associations and user groups; consultants and consulting organizations; research organizations and university computer facilities; special libraries and information centers; trade shows, professional exhibits and association conventions; online services and teleprocessing networks; journals and newsletters; and directories. Three indexes provide various ways of accessing the extensive information included in this directory. Gale, 1987, 1271 p., \$160.

Gene Banks and the World's Food — Donald L. Plucknett et al. Crop gene banks have emerged all over the world to conserve as much as possible of the gene pool of crop plants. Differences of opinion abound, says the preface, about who should own and operate such gene banks. This book is a review of the scientific issues and the policy implications of crop germplasm work. The book's global approach stresses the scientific linkages between developed nations and the Third World and their interdependence in the worldwide effort to boost agricultural production. Princeton U Pr, 1987, 247 p., illus., \$35.

Revolution in Science — I. Bernard Cohen. This book seeks to uncover the nature of scientific revolutions over the past five centuries; the stages by which they take place and their time scale. Uses specific criteria for determining whether or not a revolution has occurred and what creative factors produce a revolutionary new idea. Originally published in hardback in 1985. Harvard U Pr, 1987, 711 p., paper, \$9.95.

Songbirds in Your Garden — John K. Terres, foreword by Roger Tory Peterson, introduction by Edwin Way Teale. Tells how to attract, feed and enjoy birds in your garden, suburban backyard or country estate. Discusses feeding stations, bird-baths and bird houses and tells how they should be constructed. Describes the shrubs that can be planted to provide birds with food, shelter and protection. Includes a chapter on hummingbirds, which are found in nearly every part of the United States. Har-Row, 1987, 305 p., illus., paper, \$9.95.

The Making of the Atomic Bomb

By Richard Rhodes

The Making of the Atomic Bomb is the most gripping and authoritative account ever written of the men, women, science, drama and intrigue behind the single most important event of our century. Never before has the story been told in all its drama and complexity, from the moment when the possibility of such a device first flashed into the mind of Leo Szilard, the brilliant Hungarian scientist, to the apocalyptic Zero Hour when the actual bomb exploded over Japan.

"... the best, the richest and the deepest description of the development of physics in the first half of this century that I have yet read, and it is certainly the most enjoyable."

— Isaac Asimov

"A magnificent account of a central reality of our times, incorporating deep scientific expertise, broad political and social knowledge, and ethical insight, and filled with beautifully written biographical sketches of the men and women who created nuclear physics."

— Kirkus Reviews

Simon and Schuster, 1986, 886 pages, 6 1/4" x 9 1/2", hardcover, \$22.95
