# ORIGINS **A Skeptic's Guide to the Creation of Life on Earth**

By Robert Shapiro

Was the start of life an accident, the inevitable outcome of natural laws or the deliberate act of a supernatural being? In this riveting book, Professor Robert Shapiro explores with healthy skepticism the diverse answers — from the "prebiotic soup" and "interstellar dust" theories to Creationism — testing them against the standards of pure science. In clear, straightforward language, he exposes serious flaws in theories by Nobel laureate Francis Crick, Sir Fred Hoyle, Carl Sagan and others. He examines fossils, carbon dating, submicroscopic particles and the secrets Jupiter's moon may reveal. And he takes us on a fascinating quest of immense importance to us all.

— from the publisher

"Thought-provoking . . . everything anyone might like to know about the thinking, past and present, concerning the origins of life on earth."

— Isaac Asimov
