Why Risk It?

THE NATURE OF REALITY

By Richard Morris, author of *Time's Arrows*

These are just a few of the extraordinary theories scientists are now exploring: Space may have not three, but nine or ten dimensions. The universe may have been created out of nothing — and it is entirely possible that at some point in the future it may return to nothing. There may be other universes than our own — not other galaxies, other universes. The number of possible other universes may be infinite, and yet we may never be able to make any sort of contact with them. The universe may be splitting off into countless replicas of itself at every moment. It has been established that approximately 90 percent of the mass in the universe is made of a mysterious dark matter that scientists do not yet understand. . . . Richard Morris separates scientific fact from scientific speculation, displaying his rare gift for explaining the most sophisticated and avant-garde concepts in terms the reader can enjoy. As we reshape old ideas about time, space, force and matter, *The Nature of Reality* shows us that reality is quite a bit different from what we thought it was only a few years ago. Reality is a mysterious thing.

Oral Sadism and the Vegetarian Personality is the book that mental health professionals, their patients and everyone else who thinks someone is crazy — but who? — have been waiting for. Difficult questions have finally been answered by psychologists and other mental health professionals who have proven themselves capable of laughter by publishing these psychological spoofs in a widely read satirical journal aptly titled the JOURNAL OF POLYMORPHOUS PERSONALITY.®

No area of psychology or psychiatry is immune from this irreverent treatment. Nowhere else can the clinician find such practical aids and new techniques as how to diagnose patients by the way they park their cars at the clinic, come to understand the Little Prince's psychopathology as it has never been understood before and learn how to apply the practical principles of Vigilante Effectiveness Training (V.E.T.) in helping crime victims cope with their stress disorder.
