

# Draw your own!

**Illustrations** is meant to be a guide to virtually all types of informational illustrations used anywhere in education, business, science and government. It was developed in response to questions from technical and professional people who had sought help in preparing illustrations for publications, presentations and reports. These people simply did not know where to begin in order to translate their data and other information into a suitably formatted illustration. This book is, therefore, an attempt to fill an enormous gap with a comprehensive, up-to-date discussion of the various types of illustrations, the equipment and materials used to prepare them and the methods available for their duplication. The information within these chapters is intended primarily for the reader with

little or no previous knowledge of how to create illustrations. Main headings are tables, graphs, maps, 3-D drawings, photographs, diagrams, computer graphics; other areas covered are lettering, curve drawing devices, adhesives, correction materials and more.
