

SCIENCE NEWS®

The Weekly Newsmagazine of Science

A Science Service Publication
Volume 132, No. 19, November 7, 1987

E. G. Sherburne Jr.	Publisher
Joel Greenberg	Editor
Dietrick E. Thomsen	Senior Editor/ Physical Sciences
Laurie Jackson	Managing Editor
Wendy McCarren	Production/Design Director
Bruce Bower	Behavioral Sciences
Richard Monastersky	Earth Sciences
Stefi Weisburd	General Science
Diane D. Edwards, Rick Weiss	Life Sciences/ Biomedicine
Janet Raloff, Ivars Peterson	Policy/Technology
Jonathan Eberhart	Space Sciences
Janice Rickerich	Assistant to the Editor
Steve Eisenberg	Science Writer Intern
Jane M. Livermore	Books
Donald R. Harless	Advertising/Business Manager

Copyright © 1987 by Science Service, Inc.,

without written permission of the publisher is
prohibited.

Subscription Department
231 West Center Street, Marion, Ohio 43305

Subscription rate: 1 yr., \$34.50; 2 yrs., \$58.00.
(Foreign postage \$6.00 additional per year.) Change of
address: Four to six weeks' notice is required. Please
state exactly how magazine is to be addressed.
Include zip code. For new subscriptions only call
(1) 800-247-2160. Printed in U.S.A. Second class
postage paid at Washington, D.C., and additional
mailing offices. Title registered as trademark U.S. and
Canadian Patent Offices. Published every Saturday by
SCIENCE SERVICE, Inc., 1719 N St., N.W.,
Washington, D.C. 20036. (202-785-2255)
ISSN 0036-8423

This Week

- 292 Diabetes Autoimmunity Seen, Stopped
- 292 THA trials suspended, research probed
- 293 Amber yields samples of ancient air
- 293 Type A and coronary artery disease
- 294 The road to magnetic fusion?
- 294 Saving Mt. Wilson
- 294 Enzyme blockers slay AIDS 'giants'
- 295 Pharaoh's boat found in ancient pit
- 295 Female fish fond of male's fiefdom
- 295 Will sea animals help treat cancer?

Research Notes

- 301 Biomedicine
- 301 Earth Sciences
- 302 Science & Society
- 302 Technology

Articles

- 298 The Spark

Cover: What causes creativity? During a recent symposium, Linus Pauling, sculptor George Segal and other scientists and artists shared their most imaginative moments of discovery. These kinds of personal portraits guide psychologists in their explorations of the creative psyche. (Illustration: Melvin L. Prueitt/Los Alamos National Laboratory and the Albuquerque Art and Science Exhibition)

Departments

- 290 Books
- 291 Letters

Science Service Institution for the public understanding of science founded 1921; a nonprofit corporation.
Board of Trustees — *President*, Glenn T. Seaborg; *Vice President*, Gerald F. Tape; *Treasurer*, Willis Harlow Shapley; *Secretary*, Hilleary F. Hoskinson; Joseph W. Berg Jr.; Edward Bliss Jr.; Bowen C. Dees; David A. Goslin; J. David Hann; Milton Harris; Elena O. Nightingale; O.W. Riegel; H. Guyford Stever; John Troan; Deborah P. Wolfe.

Director: E. G. Sherburne Jr.; Assistant Director: Dorothy Schriver; Business Manager: Donald R. Harless.

Letters

The Asian advantage

In Dr. Miura's evaluation of the math achievement of U.S. and Asian schoolchildren ("Asian languages aid mathematics skills," SN: 9/19/87, p.183), was no thought given to the use of the abacus? It easily explains the Asian children's knowledge of the "10" concept.

"Johnny" is chided for counting on his fingers while Asians improve on a logical function.

Catharine Coburn
Canton, Ohio

The Chinese abacus is based on the number 10, says Miura, but the Japanese abacus is based on 5 and Koreans do not use an abacus. She adds that first-graders, who made up her study, typically have not yet used an abacus.

— B. Bower

Back to the future?

I read with interest "Big Telescopes on a Roll" (SN: 9/12/87, p.170), and thought the following quotation of interest:

To have made the 6-foot specula of equal proportionate stiffness, either they should have been enormously heavy, or the material should have been so disposed as to give greater stiffness than when simply cast into the shape of a solid disc. Some years ago it was ascertained by experiments, but on a small scale, that it would be practicable to dispose of three-fourths of the material of a speculum so as to secure a great increase of stiffness; the form adopted was a system of hexagonal cells.

This is from a paper by the Earl of Rosse in the *Philosophical Transactions of the Royal Society* for the year 1850. Of course, the "specula" in use at the time were made of metal, and the technical achievements of modern glass-mirror construction are obviously far beyond those of the last century. However, it is interesting how many ideas,

such as this honeycomb construction, are older than one might think.

Case of the cup-muncher

The "Bizarre bezoar tale" (SN: 9/19/87, p.190), in which a man who swallowed pieces of Styrofoam developed a mysterious concretion in his stomach, might simply be the case of a compulsive nibbler with incipient diabetes. Acetone levels in some diabetics can be so high that its odor can be detected on the breath. Styrofoam dissolves instantly in acetone. Acetone is also produced by fermentation during normal digestion of fruits.

If Styrofoam cup bits are softened by acetone in digestive juices, they will adhere and consolidate into hardened polystyrene as the acetone concentration is reduced by the remaining drink from that cup, this solvent being highly hygroscopic and water miscible.

John Chipura
Park Ridge, Ill.
