# STARSAILING

## Solar Sails and Interstellar Travel

by  
**LOUIS FRIEDMAN**

**“For anyone who cares about ‘Starsailing’ and ‘Solar Sails’ — an absolute must!”**

**— Ray Bradbury**

**John Wiley & Sons, 1988, 146 pages, 9" x 6", paperback, \$9.95 ISBN 0-471-62593-0**

Find out about the origins of starsailing in the '20s and the initial research in the '50s, the physics involved, the possibilities of interstellar travel, and more, all in non-technical, non-mathematical language. You'll be fascinated by the construction of square sails, spinning sails, and the heliogyro, a design that features sails miles long. *Starsailing* is provocative reading—an exciting search into the realms of high technology and the future of space travel.

## The Making of the Atomic Bomb

By Richard Rhodes

WINNER  
OF THE THREE  
MAJOR BOOK AWARDS

Here for the first time, in rich, human, political and scientific detail, is the complete story of how the bomb was developed, from the turn-of-the-century discovery of the vast energy locked inside the atom to the dropping of the first bombs on Japan. Few great discoveries have evolved so swiftly — or have been so misunderstood. From the theoretical discussions of nuclear energy to the bright glare of Trinity spanned hardly more than twenty-five years. What began as merely an interesting speculative problem in physics grew into the Manhattan Project, and then into the Bomb with frightening rapidity, while scientists known only to their peers — Szilard, Teller, Oppenheimer, Bohr, Meitner, Fermi, Lawrence and von Neumann — stepped from their ivory towers into the limelight.

*— from the publisher*

**“Rich in drama and suspense ... remarkable in breadth and depth.... The best overview of the century's pivotal event.”**

**— William J. Broad,**  
The New York Times Book Review

Simon & Schuster, 1986, 886 pages, 9 1/4" x 6", paperback, \$12.95
