Galápagos: Discovery on Darwin's Islands

By David W. Steadman & Steven Zousmer

Steadman's modern voyage of discovery begins with a description of the natural and human history of the islands, including early speculation on their formation and the mystery of the islands' colonizers, from giant tortoises and the prehistoric-seeming iguana, to the oddly "flightless" cormorants. How did these and other species arrive on these barren islands, 600 miles off the coast of Ecuador, and manage to survive? In this lively, firsthand account of scientific sleuthwork in action, a richer picture of Darwin's legendary "laboratory of nature" emerges as the reader is invited to track missing links in the evolutionary chain of extinct and living species. Written for the general reader interested in these mysterious islands and the conservation of their unique wildlife, the book is handsomely illustrated and features fifty-one color plates of original watercolors by Lee Steadman. The detailed and colorful plates depict all resident mammals, reptiles and birds, and constitute the first comprehensive "fieldguide" to Galápagos wildlife. Captions accompanying each color plate provide a thorough account of the evolution of represented species, their habitats and striking aspects of their behavior.

Can You Pass These Tests?

The toughest tests you'll never have to take, but always wanted to try

By Allen Bragdon

Bragdon, founder of *Games* magazine, has compiled a truly one-of-a-kind quiz book of real-life tests that everyone can take. From dozens of corporations, colleges and professional schools, he has collected actual tests (and answers) for such tough jobs and dream jobs, pastimes and sidelines, as: **Harvard U.S. History Final Exam • New York City Hack License • California Wine Wizard Certificate • Texas State Public School Teacher's Competency Test • Florida Real Estate Sales License • Soviet Students' U.S. History Test • Baseball Umpire • New York State Bar Exam • Air Traffic Controller • Denver Trucker's Test • Registered Nursing Exam • U.S. Citizenship • Metropolitan Police Detective • Copy Editor Competency • Introductory Psychology Abnormal Behavior Test • Voter Literacy • Ballroom Dancing Instructor • Coast Guard Seamanship and Navigation Test • Architectural Exam •**

— from the publisher

For students, job-seekers or just plain game lovers, *Can You Pass These Tests?* is a unique gift idea and an entertaining way to satisfy those unfulfilled ambitions.

Greenstein, professor of astronomy at Amherst College, believes we are faced with a mystery, and one of immense significance. In *The Symbiotic Universe*, he argues that our existence, and indeed that of every other form of life, is an utterly astonishing thing. The deeper one looks, the more surprising it becomes that life ever arose in the cosmos. For in fact our existence depends on a network of unlikely circumstances, a remarkable series of coincidences. That they occurred at all is testimony that ours is fundamentally a universe of life. In looking for an explanation, Greenstein proposes that in the fitness of the cosmos for life, we are witnessing the effects of a gigantic symbiosis—a symbiosis between the physical universe on the one hand and life on the other. Between these two there is a union, a great metaphysical dance by which each supports the other. How did it come to pass that against all odds the cosmos succeeded in bringing forth life? It had to—in order to exist.

For the first time, a softcover edition of this classic best selling text. A new, more concise database, the **CRC Handbook of CHEMISTRY and PHYSICS, 1st Student Edition** contains information selected for the needs of the student. This new paperback edition will be updated every three to four years.

Major Sections:

Mathematical Tables

Exponential, hyperbolic, trigonometric functions, derivatives, integrals and differential equations.

The Elements and Inorganic Compounds

The elements, their physical constants, usages and precautions for safe handling. Physical constants for thousands of inorganic compounds.

Organic Chemistry

Includes the definitive rules for nomenclature of organic chemistry and the massive 15,000-compound Table of Physical Constants for Organic Compounds, their related structural formulas, plus melting point, boiling point, and molecular formula indexes.

General Chemical Constants

Azeotropes, thermodynamic properties

of elements and oxides, organic analytical reagents, pH values, electrochemical series, dissociation constants, Van Der Waal's constants for gases, vapor pressures for inorganic and organic compounds.

General Physical Constants

Thermal conductivities, steam tables, nuclear spins, moments, and magnetic resonance frequencies, superconductivity, semiconductors, x-ray cross sections and wavelengths, line spectra of the elements, atomic transition probabilities and atomic and molecular polarizabilities.

Miscellaneous

Coefficients of friction, physical data for the planets and their satellites, and infrared correlation charts. Also contains definitions of scientific terms, conversion factors, and a bibliography of hundreds of government publications of additional critically evaluated numerical data.

New! The First
Student Softcover Edition

Flite Rings

Create five of your own aerodynamically designed flying rings with the FliteRings kit.

Constructed of specifically developed laminate fiber materials, each kit contains 5 pre-cut and ready-to-assemble geometrically shaped throwing rings, 20-page detailed instruction/design and performance booklet, plus three sheets of the special polycoated

composite fiber material to make your own rings. Safe, durable and fun, each ring is designed to fly with its own distinctive flight characteristics — to perform feats of hovering, distance, maximum time aloft, just to name a few. FliteRings are designed by master origami designer Stephen Weiss and will delight both aerodynamic and sport enthusiasts of all ages.

Bind and Save your copies of **Science News**

Keep your copies of SCIENCE NEWS always available for quick, easy reference in this attractive, practical binder.

Simply snap the magazine in or out in a few seconds — no punching or mutilating. It opens *flat* — for easy reference and readability. Sturdily constructed, this blue vinyl binder stamped in a gold tone will make a fine addition to your library.

SCIENCE NEWS binders hold one six-month volume of SCIENCE NEWS. Each of the 26 issues snaps into the cover with a metal rod. \$8.00 each, 2 for \$15.00. Postage-paid.

SigmaPlot™ software creates publication quality charts & graphs for the scientist.

IBM PC and Compatibles

NEW
VERSION 3.1

Create professional graphs for scientific publications, poster sessions, or lectures. Unlike business software, Sigma-Plot contains essential scientific features.

- Automatic error bars
- Multiple graphs per page
- 65,000 points per dataset

- Greek and math symbols
- Polynomial curve fitting, and more...

Accepts ASCII and DIF data files from Lotus, dBase, or your own programs. Support for Hewlett-Packard and compatible plotters, HP Laserjets, and selected dot matrix printers. Money-back guarantee.
