The Weekly Newsmagazine of Science

A Science Service Publication
Volume 134, No. 14, October 1, 1988

E. G. Sherburne Jr.	Publisher
Patrick Young	Editor
Laurie Jackson	Managing Editor
Wendy McCarren	Production/Design Director
Bruce Bower	Behavioral Sciences
Richard Monastersky	Earth Sciences
Janet Raloff	Environment/Policy
Carol Eron, Rick Weiss	Life Sciences/ Biomedicine
Ivars Peterson	Mathematics/Physics
Christopher Vaughan, Stefi Weisburd	Physical Sciences/ Technology
Jonathan Eberhart	Space Sciences
Janice Rickerich	Assistant to the Editor
Melissa Hendricks, Charles E. Knox	Science Writer Interns
Jane M. Livermore	Books
Donald R. Harless	Advertising/Business Manager

Subscription Department
231 West Center Street, Marion, Ohio 43305

Subscription rate: 1 yr., \$34.50; 2 yrs., \$58.00.
(Foreign postage \$6.00 additional per year.) Change of
address: Four to six weeks' notice is required. Please
state exactly how magazine is to be addressed.
Include zip code. For new subscriptions only call
(1) 800-247-2160. Printed in U.S.A. Second class
postage paid at Washington, D.C., and additional
mailing offices. Title registered as trademark U.S. and
Canadian Patent Offices. Published every Saturday by
SCIENCE SERVICE, Inc., 1719 N St., N.W.,
Washington, D.C. 20036. (202-785-2255)
ISSN 0036-8423

Letters

AI not necessary

In "New technologies emerge in medical AI" (SN: 8/13/88, p.101) you state that "a new generation of liquid crystal video displays charged with AI-coordinated electrical currents produce . . . polarized images . . . [which] when viewed through special polarized glasses appear completely three-dimensional. . . ."

The implication is that it requires an AI-coordinated system to produce a field-sequential stereoscopic system. Not so. Although we have sold systems for this application, most of the users of our electronic stereoscopic product are in molecular modeling, aerial mapping or computer-aided design. These products do not require artificial

This Week

- 212 Computing Limits to Superconductivity
- 212 Largest engineering prize
- 213 Recasting plaster in Late Stone Age
- 213 Well-bred cells: Poor hosts to viruses
- 214 Alternate source of fifth force challenged
- 214 DNA from single sperm spurs gene studies
- 215 Cyclosporine brings tears to dry eyes
- 215 Slip-sliding away the rough edges
- 215 New view of fatty foods in diabetics' diets

Research Notes

- 218 Biomedicine
- 218 Food Science
- 219 Science & Society
- 219 Space Sciences

Articles

220 From Here to Maternity

Cover: Bringing up baby is a precarious balancing act for increasing numbers of women with jobs outside the home. Social scientists are beginning to examine how parental leave policies might best work for mothers, fathers and employers. (Illustration by Thomas L. Tilton)

223 Flashback Photography

Chairman of the Board
StereoGraphics Corp.
San Rafael, Calif.

NASA is the originator. The machine vision work here is funded in part by the Army Missile Command, principally for its missile guidance potential. The application to human low vision is a technological spinoff that has the keen interest of both organizations.

Richard D. Juday
Manager, Robotic Vision
Tracking Techniques Branch

Houston, Tex.

Out of sequence

Regarding "Researchers eye retinal remapping" (SN: 8/20/88, p.119), describing the work being done by David Loshin and me, I would like to clarify a small point in the final paragraph. The programmable remapper was developed at the Johnson Space Center for the space applications mentioned, but not as an adaptation of military technology. Instead, the adaptation is the other way around —
