# Before the Indians

By Björn Kurtén

Illustrated by Margaret Lambert and Hubert Pepper

*Before the Indians* is a vivid panorama of vertebrate animal life as it unfolded during the more than three million years before the entrance of humans into the New World. In these pages, world renowned paleontologist Kurtén spans the periods before, during and after the onset of the glacial age. He explains how scientists can reconstruct what the plants, animals, climate and physical environment were like, and gives clear explanations of radiometric

dating, evolutionary models and interpretation of rock formations. While his account is detailed and scientifically precise, it is written in a popular style especially for the general reader. Nearly six dozen drawings and paintings strikingly portray some of the more unusual creatures and landscapes of the continent at that time.

For more than 17,000 years, they remained hidden. Then, one momentous day in 1940, two villagers stumbled upon the prehistoric cave paintings of Lascaux.

Unfortunately, after 170 centuries in the dark, the Lascaux paintings were on view for a mere 23 years. Deterioration of the paintings has forced the cave's closure since 1963. But now, *The Cave of Lascaux* reveals the rich, artistic and historical treasure of the cave—and takes you on a guided tour. You can examine these magnificent works of art when you order *The Cave of Lascaux: The Final Photographs* for just \$2.95.

Lavishly illustrated and featuring 100 color plates, *The Cave of Lascaux* brings the majesty and mystery of these ancient cave paintings to life. Author Mario Ruspoli presents a thorough, intriguing view of the civilization and era that produced these remarkable works.

The Natural Science Book Club is a unique book club devoted to bringing you exciting, refreshingly different books on all areas of the natural sciences.
