Making the Words Stand Still

**A Master Teacher Tells How to Overcome
Specific Learning Disability, Dyslexia,
and Old-Fashioned Word Blindness**

Donald E. Lyman

Making the Words Stand Still is a personal narrative as well as an introduction to Lyman's remarkable system for mastery of Specific Learning Disability. It reveals the author's own struggle with dyslexia and describes the innovative teaching methods he has developed during thirty years of helping learning-disabled children overcome their difficulties.

Lyman's program builds on and teaches through children's strengths, rather than focusing on their weaknesses. His methods are positive, they emphasize overcoming learning disabilities, and they work. *Making the Words Stand Still* is filled with courage, humor, new perspectives and hope.

"Chaisson's *Relatively Speaking* is an authoritative, gracefully written synopsis of modern relativity theory that should be accessible to a wide audience. Especially remarkable is how, through quotation and anecdotes, Chaisson shows the unique human spirit of Einstein shining through his great creation."

— Frank Wilczek

University of California, Santa Barbara, author of
Longing for the Harmonies

RELATIVELY SPEAKING

RELATIVITY, BLACK HOLES,
AND THE FATE OF THE UNIVERSE
ERIC CHAISSON

Cosmologists study the biggest picture of all, our Universe, seeking to describe its history and its features. In recent decades cosmologists have made great strides, pushing our understanding of the Universe back near its initial moments and finding in the skies ever more of the strange and wondrous objects predicted by their theory. In this well-illustrated book Chaisson attempts to demystify the theory of relativity for the general reader and to introduce some of its fascinating applications in cosmology and in the study of black holes.
