We can be informed by statistics or fooled by them, but we can't escape them — not in today's society. Here's a new book that shows us what they mean.

How to Think about Statistics is a common-sense introduction to the logic behind statistical analysis and problem solving. Instead of focusing on numerical computations, it emphasizes the thinking behind the numbers and shows you how statistics are applied in such fields as psychology, education, politics, sociology and social work. With "how-to" sample calculations and abundant examples, this book gives you a solid grasp of powerful analytical tools. It will help you think critically about the quantitative information you encounter in your business, education or professional work and as a citizen and consumer.

But thanks to this beautifully illustrated reproduction, you don't have to travel to a museum to see 6,000 years of history unfold before your eyes!

Made up of 14 connecting panels which fold out to 15½ feet in length, this chart traces mankind's history from Biblical days to the present. New sections have been added to the original, so the chart now covers history through the 1980s.
