LIFE PULSE involves its audience in a quest. Together with Eldredge readers turn back the clock, zeroing in on key "episodes" — turning points in the earth's evolution — to unlock the heart of the matter. Exploring quarries, climbing outcroppings, speculating, theorizing, adding and discarding data, Eldredge shares with readers the day-to-day doings of a working scientist. Along the way a wealth of compelling and often startling discoveries are uncovered, such as:

- Where Darwin went wrong on evolution. How, far from simply being the slow, gradual process Darwin imagined, evolution is an explosive force, happening all at once, in great spurts following massive periods of extinction.
- How the first amphibians may have evolved not to live on land but rather to find better ways to stay in the water.
- What may have caused massive extinctions in our past and why astronomical catastrophe may not be the cause.
- How man himself — with all other species — is a part of the current extinction phase.

Facts on File, 1989, 246 pages, 9" x 6", paperback, \$10.95
ISBN 0-8160-2065-5
