Mysteries of the Fourth Dimension

MATTERS

I N D

*How the Mind and Brain
Interact to Create our
Conscious Lives*

Michael S. Gazzaniga

Mind Matters describes how the mind and the brain are bound together—how activities on one level affect activities on the other. Dealing with subjects that range from pain to passion, from depression to delirium, from anxiety to addiction, the author leads the reader on a breathtaking tour of the latest research showing the myriad ways the mind interprets the chemical changes in the brain and thereby provides the substance of human consciousness.

— from the publisher

"There is a vast need to integrate our understanding of mental states with modern views of the normal function of the mind (cognitive science) and of the brain (neuroscience). This book is a fascinating and creative step toward that integration."

— Professor Michael I. Posner,
University of Oregon

Here Tomorrow: Making the Most of Life After Fifty

By Janet K. Belsky

"Good, informative reading. Janet Belsky takes as her subject the many aspects of aging — health concerns, relationships, housing, retirement planning and so on — and explores them fully. . . . Her goal is to show how to make the later years 'the pinnacle they ought to be.' She succeeds at that pursuit because she helps people over fifty learn to live active, independent and meaningful lives."

— Claude Pepper, *Chairman,*
House Select Committee on Aging

Johns Hopkins, 1988, 326 pages, 6" x 9", hardcover, \$19.95

Based on the experiences of thousands of older Americans, *Here Tomorrow* is the only book to report to the general reader the latest research findings in medicine, psychology and the social sciences.

In addition to new — and often surprising — findings, clinical psychologist Belsky offers practical strategies for aging well: for everything from changing jobs to changing homes, from finding a new doctor to treating the "Disease of Doing Too Little." For more than sixty million Americans aged fifty and over, *Here Tomorrow* is a guide to work and retirement, love and marriage, health, hobbies and leisure. It offers valuable help in coping with illness, disability and bereavement but also tells why so many consider life after fifty "the good years." Included, too, is information on new programs, services, and opportunities available to those who will be here tomorrow — and full of life.

LEARN ABOUT SCIENCE

with the *Adventures in Science* activity books. Each book is filled with games, puzzles and activities designed to enhance your child's learning skills. For ages 8-12.

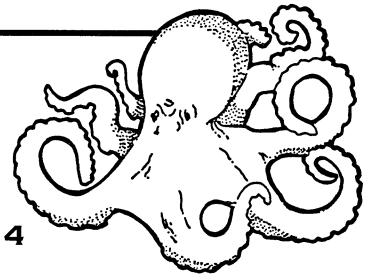

Each of these science activity books enriches students' lives by sparking interest in reading and learning, by reviewing and reinforcing the basic skills necessary for success in school.
