Your computer system could be contaminated *right now*, without your knowing it, by a rogue program that's reproducing and waiting to spread to other victims via phone line or disk. Unless you've practiced the safe computing techniques described in *Computer Viruses*, you risk losing all your data at any time.

If you use shareware or a modem, share data with others or borrow disks, you could become another victim of this electronic plague that is sweeping the nation — and the world.

With enough
 patience, you can
 perform any
 2D measurement
 with this
 equipment.

Save yourself a lot
 of trouble.

Put your planimeter, ruler,
 and calculator away. Use
 SigmaScan™ instead.

With SigmaScan, it takes only
 seconds to measure angles,
 areas, lengths, perimeters,
 slopes, and points and analyze
 the data on your own IBM PC or compatible. Each mea-
 surement is organized in a worksheet the way you want
 it, with the units you specify. You can even transform
 data based on your equations, and store data in stan-
 dard ASCII files for use in other programs. SigmaScan,
 it takes the trouble out of 2D measurement.
