This puzzle is an exclusive of Science News Books. The Earth is shown here at the same scale as the rings of Saturn. Although the brighter rings have a width about five times the Earth's diameter, their thickness is little more than one hundred meters. The photo is computer enhanced to create the vivid colors shown here. The high-quality puzzle has 600 interlocking pieces, assembled size is 18" x 24". \$9.95

The powerful new version of the world's finest PC software for the production of publicationquality scientific charts and graphs...on your own IBM® or compatible personal computer.

Used by over 15,000 scientists.

SigmaPlot, Version 3.1, is the software of choice worldwide for creating graphics for scientific papers and poster sessions, It was selected "Editor's Choice" by PC Magazine for its outstanding output. Now, Jandel's new SigmaPlot Version 4.0 gives you all of the advantages of 3.1...and much, much more.

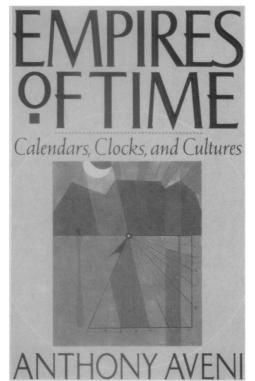

- Easy-to-use pull-down menu interface
- Direct data input from Lotus 1238 and ASCII files
- Automatic error-bars, confidence intervals and quality-control lines
- Wide range of specialized scales and graphs
- Outstanding page layout control
- Sophisticated non-linear curve fitting
- Full mathematical transform language
- Huge data worksheet
- Export graphs into WordPerfect® 5.0, Pagemaker®, Ventura Publisher® and others
- Extremely high-quality output

Affordable and fully supported.

Priced under \$500, SigmaPlot 4.0 is well within reach of any research facility. And, like all Jandel products, SigmaPlot 4.0 comes with a moneyback guarantee and the full technical support of Jandel's experts. Call today for a FREE brochure: 1-800-874-1888 (inside CA 415-924-8640).

All human societies keep track of time. We measure it with our bodies, with our machines and by the stars. In the modern world we have cut nature's perceived time loops, fashioned time into a straight line and stretched it to an incomprehensible length. But what ends do our clocks and datebooks really serve? How is our calendar different from those of ancient and "primitive" peoples? Are we in the twentieth century further from the pulse of time inherent in nature than our ancestors were? Aveni traces the roots of our modern timekeeping system and compares it with those of tribal societies like the seminomadic Nuer of Africa, as well as with those of the highly organized classical cultures of America — the Aztecs, Mayas and Incas. Deciphering the mysterious art and architecture of these ancient civilizations, Empires of Time shows how cyclical and linear notions of time developed and where the strange parts of our own calendar — the pico-second, the week, the month, the age and the era — came from. This mind-opening journey through time and timekeeping demonstrates how, throughout history, political power and power over the calendar have gone hand in hand.

By John Nichol

As well as a comprehensive natural history of the creatures, *Bites and Stings* contains information on all modern forms of treatment and first aid, and also a list of the world's suppliers of antivenom. It is both an invaluable reference book and a fascinating overview of a fascinating group of animals. *Bites and Stings* should be on the shelves of everyone interested in natural history.

- from the publisher

Bites and Stings provides a fascinating insight into the world of venomous animals and their unique relationship with humans.

Toads, snakes and spiders are among the better-known representatives of the wide-ranging group of venomous animals that inhabit our planet. Widely thought to be slimy, vicious and generally unattractive, they are held in fear and loathing by those whom they threaten least—statistics prove you are more likely to be struck by lightning than to die of a snakebite in the United States, while in Britain most people go through their life without even being stung by a wasp. Nichol explores human's relationship with these misunderstood creatures and examines the part they have played in our history, our religion and our folklore—from Little Miss Muffett to the Witches of *Macbetb*. And much

as we love to hate these animals, he shows they have a continuing part to play in the maintenance of a balanced environment.
