**With enough patience, you can perform any 2D measurement with this equipment.**

**Save yourself a lot of trouble.**

Put your planimeter, ruler, and calculator away. Use SigmaScan™ instead.

With SigmaScan, it takes only seconds to measure angles, areas, lengths, perimeters, slopes, and points and analyze the data on your own IBM PC or compatible. Each measurement is organized in a worksheet the way you want it, with the units you specify. You can even transform data based on your equations, and store data in standard ASCII files for use in other programs. SigmaScan, it takes the trouble out of 2D measurement.
