Software Safety

#101 Discarding the Throwaway Society — John E. Young. January 1991. Examines the garbage crisis and surveys steps that can be taken to encourage waste reduction, reuse and recycling, giving examples of successful international community efforts.

#100 Beyond the Petroleum Age: Designing a Solar Economy — Christopher Flavin and Nicholas Lenssen. December 1990. Profiles the technology available for harnessing renewable energy resources and the policy changes necessary to initiate the transition away from fossil fuels. Reviews the findings and current status of international efforts to tap renewable energy.

#98 Alternatives to the Automobile: Transport for Livable Cities — Marcia D. Lowe. October 1990. Outlines public-transport options available to reduce dependence on the world's 400-million-strong auto fleet and suggests ways to encourage drivers to switch over to public transport.

#94 Clearing the Air: A Global Agenda — Hilary F. French. January 1990. Proposes incentives to increase the efficiency of fossil-fuel use and encourage the use of non-polluting renewable energy sources by individuals and industry, and surveys cooperative and international alliances that have formed in the struggle against air pollution.

#90 Bicycle: Vehicle for a Small Planet — Marcia D. Lowe. September 1989. Outlines the costs and benefits of bicycle travel to the environment, the economy and individuals; how public policy can facilitate cycling; and why the bicycle seems the best alternative to mass transit in developing nations.

#82 Building on Success: The Age of Energy Efficiency — Christopher Flavin and Alan B. Durning. March 1988. Examines how energy efficiency is becoming a key determinant of national economic competitiveness and which nations are improving their efficiency.

Handbook for Academic Authors

By Beth Luey

Written in a conversational style that is interesting to read, Beth Luey, an editor, author and lecturer, introduces the reader to the standard publishing contract and offers advice on how to negotiate. She gives clear, common-sense guidance on preparing the final manuscript, applying for permission to quote, and producing suitable artwork. A new chapter prepared for this edition explains how authors and publishers can process electronic manuscripts and describes how computer disks can be used to generate camera-ready copy.

The author also gives advice on revising dissertations for publication; writing and submitting journal articles; and planning, writing and publishing scholarly books. She tells how to handle the practical and diplomatic demands of editing a multiauthor volume or an anthology and provides an introduction to the very different world of textbook writing. A concluding chapter on prices and costs will help authors understand the business of publishing.

New and experienced authors alike will find this book an invaluable guide.

— from the publisher

"... should be required reading for scholar/ authors, or would-be authors ... her book is a lucid and valuable primer that renders a needed service to academic authors and publishers alike."

Scholarly Publishing

Revised edition includes:

- How to choose a publisher for your book
- Negotiating a contract
- Submitting journal articles, revising a dissertation
- Writing a textbook
- New chapter on electronic manuscripts

Cambridge Univ. Pr., 1990, 5½" x 8½", 273 pages, paperback, \$12.95

Awakenings

The remarkable account of a group of patients who contracted sleeping sickness during the great epidemic just after World War I. Frozen in decades-long sleep, these men and women were given up as hopeless until Dr. Sacks gave them the then-new drug L-Dopa, which had an astonishing, explosive, "awakening" effect. Dr. Sacks presents the moving case histories of these individuals, the stories of their lives, and the extraordinary transformation they underwent with his treatment. Includes an essay on the making of the critically acclaimed film *Awakenings*. — from the publisher

HarperCollins, 1987 (rev. ed.), 408 pages, 5¼" x 8", paperback, \$10.95

The Man Who Mistook His Wife for a Hat & Other Clinical Tales

A story of individuals afflicted with fantastic perceptual and intellectual aberrations: patients who have lost their memories and with it the greater part of their past; who are no longer able to recognize people and common objects; who have been dismissed as retarded yet are gifted with uncanny artistic or mathematical talents. These tales are studies of life struggling against incredible adversity, and they enable us to enter the world of the neurologically impaired, to imagine with our hearts what it must be to live and feel as they do. — from the publisher

HarperCollins, 1985, 243 pages, 5¼" x 8", paperback, \$10.95

Seeing Voices: A Journey into the World of the Deaf

A beautiful and moving book, one that not only takes us into the unfathomable world of the deaf but also offers a deeply felt portrait of a minority struggling for recognition and respect. *Seeing Voices* opens with a history of the deaf, tracing their battle for acceptance in a hearing world, and goes on to consider American Sign Language, an extraordinary mode of communication that has wide-ranging implications for the hearing as well. A provocative meditation on communication, biology and culture.

HarperCollins, 1989, 186 pages, 5¼" x 8", paperback, \$8.95

Titles from Bestselling Author Oliver Sacks

Each title also available on
audio cassette for \$15.95!*

*Approx. running time 3 hrs. each, narrated by the author, abridged with music

RB1373

In the twilight years of the 20th century, science and technology have at last caught up with the most outlandish dreams of science fiction.

Great Mambo Chicken and the Transhuman Condition explores this gray area between overheated imagination and overheated reality, introducing us to a network of scientists bent on creating artificial life forms, building time machines, hatching plans for dismantling the sun, enclosing the solar system in a cosmic eggshell, and faxing human minds to the far side of the galaxy.

Meet Stanford University's Eric Drexler, father of nanotechnology, the science of molecule-size machines that can fabricate or repair literally anything; Dave Criswell, who plans to recycle the stars to increase their energy efficiency; and Bob Forward, designer of time machines, antigravity devices and a fifth-dimensional hypervelocity space drive.

"Fin-de-siècle hubristic mania," Ed Regis calls it all, that restless urge to go where humankind has never gone before. But what exactly is this compulsion that sends some of us tinkering with the basic structure of life and the laws of physics as we hurtle toward the millenium?

The answers are all in the telling of this fabulously entertaining and informative tale of science gone slightly over the edge.

"This delightful book reveals that the cutting edge is not far from the lunatic fringe.
Recommended."

— Library Journal
