

The Fun Way to Learn! For ages 8 and up

Crayons, markers or colored pencils are the only tools you need to take a walk through the forests of the world, investigate the wonders of the human body, discover the awesome new worlds beyond Earth, or explore the wondrous sea!

Forests lets you explore the enchanting, wild places we call woodlands: the cloud forests of the tropics; the bamboo forests of China (home of the giant panda); the oak, pine and holly forests of North America; and more. In each of these lush and peaceful places, you'll discover a fascinating variety of forest plants as well as the animals — birds, insects and mammals — that eat their leaves and nest in their branches.

Gray's Anatomy reveals the incredible structures and workings of the human body. Start with a look at the skeletal system, a light and strong structural frame that's almost one-quarter water. Follow the flow of blood through a network of veins, arteries and valves; discover how hand muscles can perform delicate movements and yet be so strong; and take a peek at the organs that let you breathe, hear and turn food into energy.

Space visits the most fantastic places in the universe: the swirling clouds of Venus, the strange volcanoes of Io, exploding stars and hungry black holes. You'll share the discoveries of history's greatest astronomers and find out how today's scientists work to unlock more secrets of the cosmos. Come along—new worlds await!

Only \$7.95 Each Or \$27.95 for all 4!

Running Press Publ., approx. 125 pages plus pull-out poster, $8^{1/2}$ " x 11", paperback with wrap-around cover

Oceans profiles familiar sea life as well as deepsea animals and plants you may never have imagined. You'll travel through history to explore uncharted seas, climb aboard modern research vessels to investigate newly discovered plants and animals, and learn about ocean resources and the fragile balance of nature within the sea.
