Rodale Press, 1991, 456 pages, 5½" x 9",
hardcover, \$26.95

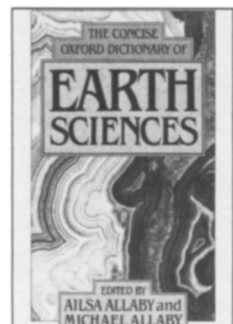

Glaciers, so simple in chemical composition, are actually complex, vital entities. Far from being a passive chunk of ice, a glacier is a dynamic system, sensitive to its surroundings, and constantly changing to adapt to its environment. An appreciation of the natural beauty of glaciers and their products is enhanced by an understanding of how glaciers are created, how they behave, how they affect the environment and how they are eventually destroyed.

Living Ice: Understanding Glaciers and Glaciation aims to increase our knowledge and understanding of glacial activity and products. Written in a non-technical and engaging style, the text is peppered with anecdotes and insights from one of the world's experts on glaciers and is thoughtfully illustrated with numerous stunning black and white and color illustrations. It is suitable for anyone with a passing knowledge of earth science and an interest in the world of living ice.

Gut Reactions

Understanding Symptoms of the Digestive Tract

By *W. Grant Thompson*

Thompson explains the causes, symptoms and treatments of irritable bowel, non-ulcer dyspepsia, irritable esophagus, heartburn, proctalgia fugax, chronic abdomen, globus, diverticula, burbulence, constipation and diarrhea. The explanations of these nonfatal syndromes, if coupled with the advice of a qualified physician, can help the reader avoid needless surgery, expensive and even harmful tests and unnecessary worry about mortal disease.

— from the publisher

"Everything you've ever wanted to know about gut reactions . . . I was impressed with his ability to translate important medical findings into everyday language."

— Marvin Schuster, Francis Scott Key Medical Center

Plenum, 1989, 377 pages, 8 1/2" x 6", hardcover, \$22.95

These two volumes are filled with experiments to amuse and amaze the young scientists in every household. Each page is jam-packed with color illustrations and clear, step-by-step instructions to help elementary school children have fun while learning how things work and why things happen in the world around them.

By doing the hands-on activities, children can explore the basic scientific ideas that play a role in their lives — using ordinary items that can be found right at home!
