

DINOSAURS

A GLOBAL VIEW

SYLVIA J CZERKAS
STEPHEN A CZERKAS

More than any other group of animals, it is the dinosaurs which capture the imagination of children and adults alike.

Utilizing the most up-to-date scientific research, this remarkable new book explores the mysterious world of the dinosaurs.

The unique perspective of *Dinosaurs—A Global View* presents a clear and exciting chronology documenting the worldwide events which led to the origins, continual evolution and extinction of the dinosaurs.

Lavishly illustrated with over 90 beautiful full-color plates, the prehistoric past is brought to life in stunningly vivid images with a detailed accuracy as never before and is further complemented by 3 family trees, 27 maps and over 90 original skeletal drawings. The lively and authoritative text takes the reader on a journey into a world that has been lost in time. In a highly detailed account based on tangible evidence from fossil records, this comprehensive overview dispels many popular myths and controversial misconceptions about dinosaurs. With a thorough clarity, the evolution of the world of reptiles and their successful reign is explained.

With the turning of every page, the reader will enter

deeper into a lost world that lasted for over 140 million years and finally ended over 65 million years ago. Traveling through time, the reader is taken back into a world of mammal-like creatures that existed before the dinosaurs; to experience the effects of global climate changes, moving continents that collided and broke apart, forming new oceans and seaways. Follow along and find out how the dinosaurs came to be: why there were different kinds of dinosaurs; why they displaced the course of mammalian evolution; what they really looked like and how they lived. *Dinosaurs—A Global View* provides the most in-depth understanding of dinosaurs ever presented.
