

Books

Books is an editorial service for readers' information. To order any book listed or any U.S. book in print, please remit retail price, plus \$2.00 postage and handling charge for each book, to **Science News Books**, 1719 N St., N.W., Washington, DC 20036. To place Visa or MasterCard orders, call 1-800-544-4565. All books sent postpaid. Domestic orders only. Please allow 4-6 weeks for delivery.

A Dictionary of Scientific Quotations — Alan L. Mackay. Who said, "It is a good thing for an uneducated man to read books of quotations" or "Only you can prevent forests"? How about "The number you have dialed is imaginary. Please multiply by *i* and dial again"? Mackay, a professor of crystallography, reveals the sources in his personal selection of quotations. Topics include graffiti, song lyrics, proverbs and poetry; sources include scientists, philosophers, humanists, theologians and politicians. Adam Hilger, 1991, 297 pages, paperback, \$19.00.

Elephants in the Volkswagen: Facing the Tough Questions About Our Overcrowded Country — Lindsey Grant. The author, a former deputy assistant secretary of state for environmental and population affairs, addresses the issue of overpopulation in the United States, which has grown from 75 million people to 250 million in the last century. With the help of environmentalists, sociologists, defense specialists and economists, Grant produces target numbers for population, immigration and fertility, and presents a plan for arriving at these numbers. W H Freeman, 1992, 272 p., hardcover, \$22.95.

Environmental Jobs for Scientists and Engineers — Nicholas Basta. This guide to career opportunities in environmental science covers engineering, manufacturing, electronics, chemistry, biology and computer science. Includes detailed profiles of working professionals in environmental careers. With names and addresses of professional and educational organizations as well as prospective employers. Wiley, 1992, 228 p., hardcover, \$34.95.

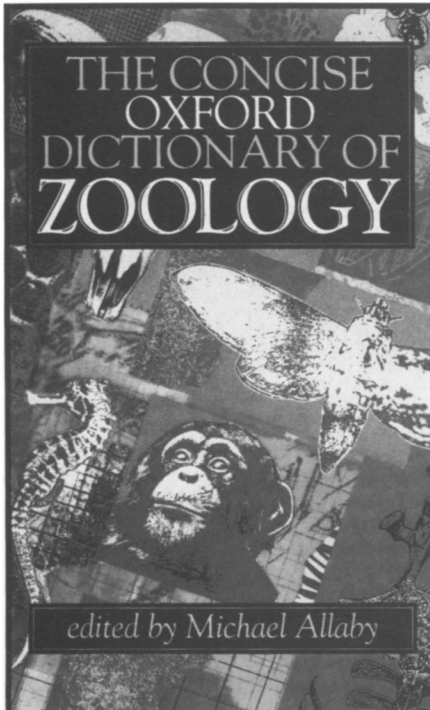

Gardening at a Glance: The Organic Gardener's Handbook on Vegetables, Fruits, Nuts and Herbs — Tanya Denckla. This guide shows how to grow vegetables, fruits, nuts and herbs, discussing which abundant, disease-resistant varieties to choose, when to harvest and how to store, how to choose companion plants and how to control more than 150 pests. Lists references and resources, including addresses of seed companies, nurseries and state gardening associations. For beginners and experienced gardeners alike. Wooden Angel, 1991, 272 p., paperback, \$22.95.

The Harper Collins Dictionary of Astronomy and Space Science — Diane F. Moore. In addition to defining more than 2,200 terms, this reference includes biographies of astronomers and astronauts, charts and diagrams to illustrate key concepts, star maps and planetary data charts. For students and professionals. Harper-Collins, 1992, 338 p., paperback, \$13.00.

The Truth About Chernobyl — Grigori Medvedev. This account of the events leading up to the Chernobyl tragedy and the subsequent cover-up is written by a nuclear physicist who worked at Chernobyl as a chief engineer and who was commissioned to investigate the disaster. Medvedev examines events that occurred on the night of the explosion and over the next few days, what caused the disaster, the consequences and lessons, and implications for the future. With foreword by Andrei Sakharov. Basic, 1991, 274 p., paperback, \$12.00.

Who to Call: The Parent's Source Book — Daniel Starer. This resource guide tells how to get information on such subjects as pregnancy and childbirth, fertility, single parenting, education, adolescence, addiction, special-needs children, camps, hobbies, sports, nutrition, health, grief and mourning, recreation and consumer goods. With hotlines, organizations, 800 numbers, advice on whom to call first and 12 ways to get the best results over the phone. Quill, 1992, 654 p., paperback, \$15.00.

- The only dictionary of zoology available in English
- Authoritative and up to date
- Nearly 6,000 entries
- For students and nonspecialists

The Concise Oxford Dictionary of Zoology is the first dictionary of zoology to be published for many years.

The bulk of the entries have been taken from the acclaimed *Oxford Dictionary of Natural History*, but every entry has been scrutinized, many have been amended, and some have been rewritten completely to adapt them for the use of students.

The subjects covered include ecology, evolutionary concepts, animal behavior, Earth history, cell structure and function, physiology, zoogeography, taxonomic principles and genetics. There are also brief biographical notes on some of the most important figures in the development of the relevant disciplines. The taxa covered include invertebrates, with particular emphasis on arthropods, fish, reptiles, amphibians, birds and mammals.

— from the publisher

Oxford U Pr, 1991, 508 pages, 5½" x 8¾", hardcover, \$39.95
