Exploring the Moon's Other Face

It has been said that there is no love sincerer than the love of food. Throughout the ages people always have had a love affair with food.

In **The Secret Life of Food: A Feast of Food and Drink History, Folklore, and Fact**, Martin Elkort tells of his love with rare knowledge guaranteed to inform and entertain. This book is for anyone who plants, grows, gathers, hunts, stores, processes, purchases, cooks, serves, discusses, thinks and dreams about, or eats food. It is a book of food lore in which readers will

discover such intriguing facts as: the Caesar salad was invented in 1927 in Tijuana, Mexico, by Alex Cardini, after his brother, Caesar; vermicelli means "little worms" in Latin, spaghetti means "strings" in Italian; and milk originally meant "to stroke," and referred to the act of milking a cow.

The 3-Pound Universe reveals the current progress made in the exploration of the mysteries of the human brain and introduces the scientists behind the discoveries. Hooper and Teresi spent four years visiting the nation's brain laboratories, from the schizophrenia wing of the National Institute of Mental Health to the hallucination chambers of the University of California, Los Angeles, to research the mysterious world of neuroscience. Their accessible discussion covers historical theories on the impact of the brain, the chemical brain, madness and memory; altered brain states such as dreams, hallucinations and near-death experiences; and the mind/brain connection.

"Exciting reading about a world of fast-breaking discoveries... an excellent survey of neuroscience... highly recommended."

—Library Journal

"The 3-Pound Universe is a stimulating part of the conversation our brains keep having with themselves about who they are and how they got here... brisk, readable, relentlessly fascinating... The anecdotal portraits of quirky, brilliant scientists are especially good."

—New York Times Book Review
