Terrible Endotoxins

"Balling's book is as remarkable for what it is not as for what it is. It is most assuredly not a polemic. Balling never challenges either current modeling efforts or present data analyses. Rather, he shows that, when these are viewed dispassionately and in relation to each other, they provide no support for the 'popular vision' of forthcoming climate catastrophe. Balling's text as well as Wildavsky's perceptive introduction place calls for immediate (and frequently irrelevant) action into a rational perspective."

—RICHARD S. LINDZEN, MIT

ROBERT C. BALLING, JR.

THE HEATED DEBATE

Greenhouse Predictions

Versus Climate Reality

Introduction by Aaron Wildavsky

Robert C. Balling Jr. dispels much of the "science fiction" of global warming and the greenhouse effect, skillfully guiding the reader through the minefield of charged scientific issues, while getting across the message that environmental disaster is not imminent.

Balling represents a growing band of scientists dedicated to giving the public and government a factual view of global warming. He urges political leaders, policymakers, and average citizens to start thinking rationally about its effects.

In this major new work, John Searle launches a formidable attack on current orthodoxies in the philosophy of mind. Beginning with a spirited discussion of what's wrong with the philosophy of mind, Searle characterizes and refutes the philosophical tradition of materialism. But he does not embrace dualism. He elaborates a theory of consciousness and its relation to our overall scientific world view and to unconscious mental phenomena. He concludes with a criticism of cognitive science and proposes an approach to the study of mind that emphasizes the centrality of consciousness.
