*Life
on
the
Edge*

"Freud supposed that what human beings most wanted was a state of tranquility following the discharge of all tensions. Freud was wrong. Professor Apter rightly stresses man's need for arousal and excitement; a need so pressing that it must find an outlet even if it leads to danger and destruction." — Anthony Storr, Author of Solitude

Why do people seek out uncomfortable, unnecessary, and often dangerous activities — skydiving, or bullfighting, or fast driving? Michael Apter offers the first comprehensive and accessible guide to the psychology of excitement, in which he explores the fascinating and complex relationship between excitement and anxiety, panic and euphoria.

The Dangerous Edge illuminates the varied and complicated components of the human need for excitement and convincingly depicts its major relevance to issues in contemporary society.

YOU CAN CONTROL THE AGING PROCESS

BIOMARKERS

THE 10 KEYS TO Prolonging Vitality

THE REVOLUTIONARY,
MEDICALLY PROVEN
PROGRAM THAT
CAN ADD YEARS
TO YOUR LIFE AND
LIFE TO YOUR YEARS

PROFESSORS OF NUTRITION AND MEDICINE, TUFTS UNIVERSITY WITH JACQUELINE THOMPSON

"If ever a book could take the worry out of aging, this one's it."

—Kenneth H. Cooper, M.D., founder, The Cooper Clinic

Exciting new evidence from the USDA Human Nutrition Research Center on Aging at Tufts University has demonstrated that the body's decline is due *not* to the passing of years but to the combined effects of inactivity, poor nutrition, and illness — much of which can be controlled.

Providing dietary guidelines, self-tests for evaluating your physiological age, and exercise programs for every level of fitness, *Biomarkers* will change forever the way you think — and what you do — about aging.

"This is an invaluable guide to a cultural treasure we must learn to understand if we are to conserve it for future generations." —Dr. Alfonso Ortiz, Native American scholar, teacher, and author, Santa Fe, N.M.

Interest in American rock art has grown significantly among professional archaeologists and informed lay persons in recent years, but the purpose and meaning that the intriguing symbols had for their creators remain a mystery. *The Field Guide* brings together 600 commentaries on specific symbols by over one hundred archaeologists, anthropologists, researchers, and Native American informants. Intended to be used in the field, as well as a

reference, the book includes a pictorial key at the beginning and is organized by tentative meaning or by description. Patterson emphasizes the tentative nature of the interpretations and has included an index by neutral archaeological description as well as complete documentation of every excerpted comment. The range of the book is from the northern states of Mexico to Utah and from California to Colorado.

Electromagnetic fields and cancer

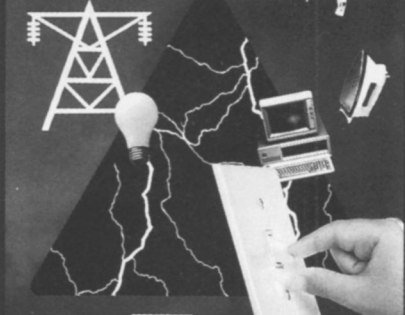

Electromagnetic fields (EMFs) are generated by all electrical devices, such as lights, appliances, powerlines, and office equipment. The health risks have been covered up by the power companies, the military, and even the White House itself, for when scientists at the Environmental Protection Agency wanted to label EMFs a "class B carcinogen" (like cigarettes) they were prevented from doing so.

Now, the truth about the EMF-cancer connection is being told. This book is an invaluable guide to the risks of EMFs and the steps you can take to protect yourself and your family.
