

## GO FOR THE GOLD! SOFTWARE FOR FITNESS

Selected for use by the U.S. Sailing Team in preparation for the 1992 Summer Games in Barcelona.

Over 4,700 exercises are graded for contribution to aerobic fitness, flexibility, strength, muscular endurance and power for the body's eleven major muscle groups. Free weights, machines, jogging, flexibility exercises, cycling walking, rowing, and many, many more.

Includes more than 30 different workout programs from entry level through advanced body building. Custom programs developed specifically for golf, tennis, basketball, lower back strengthening and more are provided.

Use our workouts or design and evaluate your own. Print workout cards to take to the gym. Whatever your sport, Personal Fitness Trainer will improve your performance while reducing the risk of injury.

Available at retail stores nation-wide. For the dealer nearest you, contact Digital Systems Research, Inc. (619) 695-3598

## Books

**Books** is an editorial service for readers' information. To order any book listed or any U.S. book in print, please remit retail price, plus \$2.00 postage and handling charge for each book, to **Science News Books**, 1719 N St., N.W., Washington, DC 20036. To place Visa or MasterCard orders, call 1-800-544-4565. All books sent postpaid. Domestic orders only. Please allow 4-6 weeks for delivery.

**The Diversity of Life** — Edward O. Wilson. The author, a scientist and two-time Pulitzer Prize winner, traces the processes that create new species and points out the cataclysmic events that have disrupted evolution and diminished global diversity over the past 600 million years. He pleads for specific actions that will enhance diversity and the quality of life on Earth. Harvard U Pr., 1992, 424 p., hardcover, \$29.95.

**It's Raining Frogs and Fishes: Four Seasons of Natural Phenomena and Oddities of the Sky** — Jerry Dennis. Where do meteors and comets originate? How have civilizations throughout history dealt with occurrences such as the aurora borealis, windstorms, and eclipses? The author of numerous articles on outdoor subjects and unusual wildlife behavior, Dennis suggests ways to observe extraordinary weather, astronomical anomalies, and odd and interesting wildlife of the skies. Each subject is arranged by season and discussed in an essay that blends scientific findings with lore and superstitions, historical anecdotes, and personal observations. Harper-Collins, 1992, 323 p., hardcover, \$20.00.

**Pi in the Sky: Counting, Thinking, and Being** — John D. Barrow. An author of books on physics and astronomy explores the origins, meaning, and future of mathematics. He examines such topics as the most ancient and diverse anthropological evidence of counting and the dethroning of Euclidian geometry in the 19th century. His concluding chapter challenges us to consider how future mathematics may be radically different from the present, and how this impinges upon our efforts to create an artificial intelligence. Oxford U Pr., 1992, 336 p., hardcover, \$25.00.

**The Transformed Cell: Unlocking the Mysteries of Cancer** — Steven A. Rosenberg. The chief of surgery at the National Cancer Institute describes his quest to halt the spread of cancer. In 1968, when he encountered a patient whose cancer had mysteriously disappeared, he set out to see if immunotherapy, and later gene therapy, could succeed where surgery, chemotherapy, and radiation had failed. With cautious optimism he tells of the potential of these new treatments and of his most recent experiments. Putnam Pub Group, 1992, 353 p., hardcover, \$24.95.

**Wildwoods Wisdom: Encounters with the Natural World** — Doug Elliott. A naturalist and wildlife artist describes nature through the eyes of people from different walks of life, including Native Americans, Appalachian mountain men, biologists, Pentacostal snake handlers, hoodoo root doctors, and possum breeders. Generously illustrated with black-and-white line drawings. Paragon Hse., 1992, 196 p., hardcover, \$22.95.

# Reversing Memory Loss

PROVEN METHODS  
FOR REGAINING,  
STRENGTHENING,  
AND PRESERVING  
YOUR MEMORY

BY  
THE  
AUTHORS OF  
**Brain Power**

Vernon H. Mark, M.D., F.A.C.S.  
with Jeffrey P. Mark, M.Sc.

**"Of great interest to anyone who has ever wished for a great physician to explain how the brain works and what can be done to keep it 'clean and clear.'"**

—Christine O'Hara, Ph.D., Director  
Center for Psychological and  
Rehabilitation Services, Atlanta

Dr. Vernon H. Mark, a famed neurosurgeon, outlines new tests, new diagnoses and new treatments that mean hope for millions who suffer from memory loss.

Depression, stress, substance abuse and overmedication are increasingly common as causes of memory loss that can be reversed with proper treatment. Even Alzheimer's disease, for which we have not yet found a cure, can often be slowed or

helped. Dr. Mark emphasizes that as many as 30 percent of the cases diagnosed as Alzheimer's disease may indeed be other problems that can be treated.

*Reversing Memory Loss* provides a step-by-step program for finding the real underlying causes of confusion and memory loss, and for working out a balanced plan of treatment to restore or preserve competence and memory.
