

# SCIENCE NEWS®

The Weekly Newsmagazine of Science

A Science Service Publication  
Volume 142, No. 20, November 14, 1992

Alfred Scott McLaren	Publisher
Patrick Young	Editor
Laurie Jackson	Managing Editor
Vaughan	Editor
Janice Rickerich	Production/Design Director
Blair Burns Potter	Associate Editor
Janet Raloff	Senior Editor
	Environment/Policy
Ron Cowen	Astronomy
Bruce Bower	Behavioral Sciences
Elizabeth Pennisi	Chemistry/ Materials Science
Richard Monastersky	Earth Sciences
Carol Ezzell	Life Sciences/ Biomedicine
Kathy A. Fackelmann	Mathematics/Physics
Ivars Peterson	Editorial Assistant
Larry Norland	Science Writer Intern
Daniel Pendick	Books/Resource Manager
Connie Williams	Advertising/Business Manager
Donald R. Harless	

SCIENCE NEWS (ISSN 0036-8423) is published weekly on Saturday, except the last week in December, for \$39.50 for 1 year or \$68.00 for 2 years (foreign postage \$6.00 additional per year) by Science Service, Inc., 1719 N Street, N.W., Washington, DC 20036. Second-class postage paid at Washington, DC, and additional mailing office. **POSTMASTER:** Send address changes to SCIENCE NEWS, P.O. Box 1925, Marion, OH 43305. Change of address: Four to six weeks' notice is required — old and new addresses, including zip codes, must be provided.

**Editorial and Business Offices:**  
1719 N St., N.W., Washington, DC 20036  
(202-785-2255)  
Republication of any portion of SCIENCE NEWS without written permission of the publisher is prohibited.

**Subscription Department:**  
P.O. Box 1925, Marion, OH 43305  
For new subscriptions only, call 1-800-247-2160.  
For customer service, call 1-800-347-6969.

## Letters

### Look out below!

Researchers studying eastern white cedars of the Niagara Escarpment ("Cliffhanging Science," SN: 9/26/92, p.200) should take advantage of the thousands of years of Japanese and Chinese experience with bonsai culture.

For example, there should be no "puzzle over the logs' preservation." Bonsai culturists know that, because of its higher density, slow-growing wood is less structurally compromised over time than is faster-growing wood. (Higher density is caused by drier, tighter packing between cells.)

Also, size is not the primary factor in blow-down. Clearly, one should look downward for the "root cause."

Hector Samkow  
Lake Oswego, Ore.

**The organisms on the Niagara Escarpment** are extremely stressed. As a resident of this region, I have experienced changes in temper-

### This Week

- 324 Diet Changes May Buy Cancer Patients Time
- 324 Debate may resume over volcano-climate link
- 325 Dolphin sonar: Using their heads to click
- 325 Infants signal the birth of knowledge
- 326 Two distant galaxies provide new puzzles
- 326 Dante breaks four legs
- 326 Flabby teenage years presage health risks
- 327 Simulated fullerene tubules act as straws
- 327 Clues to the sex chromosome gender gap

### Research Notes

- 331 Astronomy
- 331 Behavior
- 333 Biomedicine
- 334 Earth Science

### Articles

- 329 Basins of Froth

Cover: The intricate lacework of colors in this computer-generated portrait of a dynamical system illustrates a newly discovered type of wild behavior that sometimes arises out of the manipulation of simple mathematical expressions. (Image: J. C. Alexander, Univ. of Md.)

- 332 Abusive Inheritance

### Departments

- 322 Books
- 323 Letters

**Science Service**, a nonprofit corporation founded in 1921, gratefully accepts tax-deductible contributions and requests to assist its efforts to increase the public understanding of science, with special emphasis on young people. More recently, it has included in its mission increasing scientific literacy among members of underrepresented groups. Through its Youth Program it administers the International Science and Engineering Fair, the Science Talent Search for the Westinghouse Science Scholarships, and publishes and distributes the *Directory of Student Science Training Programs for Precollege Students*.

**Board of Trustees** — *Chairman*, Glenn T. Seaborg; *Vice Chairman*, Gerald F. Tape; *Secretary*, David A. Goslin; *Treasurer*, Willis Harlow Shapley; Joseph W. Berg Jr.; Robert W. Fri; J. David Hann; Dudley Herschbach; Shirley M. Malcom; Elena O. Nightingale; Ben Patrusky; H. Guyford Stever; Sanford J. Ungar; Deborah P. Wolfe. **Honorary Trustees** — Edward Bliss Jr.; Bowen C. Dees; O. W. Riegel; John Troan.

**President:** Alfred Scott McLaren; **Vice President and Business Manager:** Donald R. Harless.

ature of more than 50° in several hours. Such rapid fluctuations cause dramatic microscale changes in rock structure. The roots of the cedars under study could have more moisture available in the course of a day than in the preceding several decades.

The dendrochronological evidence derived from this study may be used to corroborate other findings, but it should not be used as a primary source upon which to base theories of our regional climatic history.

Todd K. Parmington  
Tonawanda, N.Y.

### No laughing matter

In "The reproductive hazards of nitrous oxide" (SN: 10/3/92, p.215), the researchers may have overlooked a very simple explanation. Did anybody ask the women how often or when in their menstrual cycle they had intercourse? Perhaps "laughing gas" simply reduces sexual desire or ability.

Wayne Wyrick  
Warr Acres, Okla.

**Surely the researchers** could easily have discovered the earlier and possibly more comprehensive studies that led the National Institute for Occupational Safety and Health (NIOSH) to publish in 1977 its "Criteria for a Recommended Standard [for] . . . Occupational Exposure to Waste Anesthetic Gases and Vapors" [DHEW pub. no. (NIOSH) 77-140].

The publication emphasized primarily hospital operating-room personnel exposed to nitrous oxide and the higher-than-normal incidence of birth defects among them. The effects extended in some instances to the wives of male anesthesiologists.

Since 1977, all new or remodeled operating suites in California have had special evacuation systems for waste anesthesia gases.

Norman MacRitchie  
San Francisco, Calif.

### CORRECTION

Photographs of the jellyfish polyp and ephyra in "Biomedicine Blasts to New Heights" (SN: 10/17/92, p.268) are reversed.
