The Weekly Newsmagazine of Science

Science Service Publication  
Volume 143, No. 5, January 30, 1993

Alfred Scott McLaren	Publisher
Patrick Young	Editor
Laurie Jackson	Managing Editor
Vaughan	Editor
Janice Rickerich	Production/Design Director
Blair Burns Potter	Associate Editor
Janet Raloff	Senior Editor
	Environment/Policy
Ron Cowen	Astronomy
Bruce Bower	Behavioral Sciences
Elizabeth Pennisi	Chemistry/ Materials Science
Richard Monastersky	Earth Sciences
Daniel Pendick	General Science
Carol Ezzell,	Life Sciences/ Biomedicine
Kathy A. Fackelmann	
Ivars Peterson	Mathematics/Physics
Larry Norland	Editorial Assistant
Cait Anthony	Books/Resource Manager
Donald R. Harless	Advertising/Business Manager

SCIENCE NEWS (ISSN 0036-8423) is published weekly on Saturday, except the last week in December, for \$39.50 for 1 year or \$68.00 for 2 years (foreign postage \$6.00 additional per year) by Science Service, Inc., 1719 N Street, N.W., Washington, DC 20036. Second-class postage paid at Washington, DC, and additional mailing office. POSTMASTER: Send address changes to SCIENCE NEWS, P.O. Box 1925, Marion, OH 43305. Change of address: Four to six weeks' notice is required — old and new addresses, including zip codes, must be provided.

### Vitamin C and heart disease

Regarding "White cells and the formation of plaque" (SN: 11/28/92, p.373), Linus Pauling has presented a reasonable explanation for the role of white blood cells in the formation of atherosclerotic plaque.

Pauling asserts that atherosclerosis is initiated by oxidative attack on the arterial walls of individuals whose blood and arterial tissue contain inadequate levels of vitamin C and other antioxidants. This attack is followed by deposition of white cells and other components of arterial plaque in an attempt to heal the wounded artery. In many people, this cycle is repeated over and over until their arteries become clogged with material. Factors such as high concentrations of cholesterol in the blood pose a risk of heart disease only if the walls of the arteries are weakened by vitamin C deficiency.

It is common to dismiss Pauling's ideas

### This Week

- 68 Antibody Spurs Disfavored Reaction
- 68 Fats may influence insulin sensitivity
- 69 Sizing up implants that banish the silence
- 69 Getting lead atoms into carbon nanotubes
- 70 Arctic shows no signs of greenhouse warmth
- 70 This could be your brain on booze
- 71 Young scientists compete in talent search
- 71 Depression, smoking divulge ties that bind
- 74 Life at other stars: A matter of climate

- 79 Technology

### Articles

- 72 Ties That Bind

Cover: As shown in this computer portrait, crystallographic studies have revealed in atomic detail the chemical bonds that attach protein fragments to the grooved molecules that help the immune system distinguish "self" from "nonself." The knowledge gained from these structural studies may lead to more effective vaccines, researchers suggest. (Credit: Weiguo Zhang et al.)

Science Service, which publishes SCIENCE NEWS, is a nonprofit corporation founded in 1921. It gratefully accepts tax-deductible contributions and bequests to assist its efforts to increase the public understanding of science, with special emphasis on young people. More recently, it has included in its mission increasing scientific literacy among members of underrepresented groups. Through its Youth Program it administers the International Science and Engineering Fair, the Science Talent Search for the Westinghouse Science Scholarships, and publishes and distributes the *Directory of Student Science Training Programs for Precollege Students*.

Board of Trustees — *Chairman*, Glenn T. Seaborg; *Vice Chairman*, Gerald F. Tape; *Secretary*, David A. Goslin; *Treasurer*, Willis Harlow Shapley; Joseph W. Berg Jr.; Robert W. Fri; J. David Hann; Dudley Herschbach; Shirley M. Malcom; Elena O. Nightingale; Ben Patrusky; H. Guyford Stever; Sanford J. Ungar; Deborah P. Wolfe. Honorary Trustees — Edward Bliss Jr.; Bowen C. Dees; O.W. Riegel; John Troan.

President: Alfred Scott McLaren; Vice President and Business Manager: Donald R. Harless.

about vitamin C and other antioxidants as quackery. However, more and more evidence is emerging that is consistent with his assertions. Those who dismiss them may well do so at their own risk.

David R. Schryer  
Hampton, Va.

### As the grammatical twig is bent . . .

I read with interest "Grammar skills best learned when young" (SN: 11/28/92, p.383), particularly because my own experience seems at variance with Ms. Neville's study. As a child raised in a small town, my exposure to other tongues was minimal. English was the only language I truly knew.

At age 17, when I started college, I took up German. Determined to become fluent beyond elementary conversation, I paid frequent and exhaustive trips to the language laboratory. At my professor's suggestion, I immersed myself in this tongue, speaking no English for days on

end. After four years of language and advanced literature courses, I graduated *magna cum laude* with a German major.

Today, 15 years later, native speakers tell me I have retained fluency in German and have no detectable English accent. I find myself occasionally thinking and dreaming in German. When I speak or write it, I rely on the feel for speech and composition I have developed through years of practice.

Ms. Neville "suggests that exposure to a second language needs to occur before age 11 if a person is to become truly fluent." Her group determined that a special left-brain process for grammatical information develops during this period. Perhaps the kind of linguistic stimulation I went through as an adult can reactivate this mechanism. I am aware of others with similar experiences and suggest that the study's conclusions might be a bit pessimistic.

Terry J. Stone
