Just In Time for the New Administration!

From AIDS to global change to economic competitiveness, the agenda of the U.S. Congress is increasingly dominated by issues involving science and technology.

Working With Congress shows scientists and engineers how to participate meaningfully in the inner workings of Congress . . . to initiate and maintain a productive dialogue . . . and to make their influence felt. Such a guide has been long overdue. It provides clear, detailed background information and step-by-step advice — in many cases supplied by the lawmakers themselves and their staffs — to all those concerned about America's role in a technologically oriented world.

Additionally, it contains an invaluable appendix of names, addresses, telephone numbers, and congressional logistics as well as a legislative glossary.

William G. Wells, Jr. is an engineer with a wide range of distinguished experience in science and government: as a manager in NASA's Apollo Program, as staff director for key science subcommittees in the U.S. House of Representatives, as chief of staff at the White House Office of Science and Technology Policy, and as head of the AAAS Office of Public Sector Programs.

M.C. Escher Metamorphosis T-Shirt

These reproductions of Escher's "symmetry" patterns — horses, fish, birds, and boats transforming, interlocking, and repeating — create a mythical illusion on this white 100% cotton T-shirt. All over pattern differs slightly on back. **Only \$19.95.**
