*"A historical, cultural, almost
magical mystery food tour."*
— New York Daily News

When Christopher Columbus stumbled across America in 1492, the Italians had no pasta with tomato sauce, the Chinese had no spicy Szechuan cuisine, and the Aztecs in Mexico were eating tacos filled with live insects instead of beef. In this lively, always surprising history of the world through a gourmet's eyes, Raymond Sokolov explains how all of us — Europeans, Americans, Africans, and Asians — came to eat what we eat today. He journeys with the reader to the far-flung ports of the former Spanish Empire in search of the points where the menus of two hemispheres merged. In the process he shows that our idea of "traditional" cuisine in contrast to today's inventive new dishes ignores the food revolution that has been going on for the last 500 years. *Why We Eat What We Eat* is an exploration of the astonishing changes in the world's tastes that let us partake in a delightful, and edifying, feast for the mind. — from *Simon & Schuster*

Science News Books WhyWeEat
1719 N Street, NW, Washington, DC 20036

Please send _____ copy(ies) of *Why We Eat What We Eat*. I include a check payable to Science News Books for \$11.00 plus \$2.00 postage and handling (total \$13.00) for each copy. Domestic orders only.

paperback, \$11.00

Gale NemeC is the lively host of *Living with Animals*, the only educational television program that covers pets, wildlife, and current animal concerns. Now she has translated her years of experience into book form: The result is a wonderfully comprehensive and practical guide to every aspect of cat ownership and care. *Living with Cats* includes advice on:

- Cat-proofing your home
- Training and even teaching your cat tricks
- Diagnosing common cat ailments
- Neutering and declawing
- Cat equipment and supplies
- Coping with the death of a cat

Living with Cats is warm, user-friendly, and fun — a guide that will be referred to again and again by cat lovers.

WHAT THE ODDS ARE is a reference book unlike any other, filled with information unavailable in any other single source. Where else can you find the odds of getting killed by your wife, being dealt a royal flush, giving birth to a genius or siamese twins, contacting AIDS, going to jail, getting spanked at school, missing your connecting flight, surviving a war and thousands of other likely and not so likely occurrences. With some 4,000 events in all, thoroughly cross-referenced, there's all this and more, it's all true and, as Casey would say, you could look it up.

MYTH: You really have to watch out for sharks when you go swimming in the ocean, because you're likely to get bitten.

FACT: You're much more likely to hit the lottery jackpot. And the odds of that happening are about 4 million to 1. Fact is, you're immensely more likely to get bonked by a fly ball in the stands at a major league game: The odds of getting pegged come to approximately 300,000 to 1.

"This large, beautifully produced and illustrated book is . . . for those who are tired of woolly generalizations on art and pictures. The Science of Art has a rare depth and range of scholarship which includes fascinating details of techniques and devices with carefully expressed insights on the perceptual problems of the artist and the role of the viewer."

— Richard L. Gregory, *Interdisciplinary Science Reviews*

For almost five hundred years the central goal of European painting was the imitation of nature. Many artists and theorists, believing that imitation must be based on scientific principles, found inspiration or guidance in two branches of optics — the geometrical science of perspective and the physical science of color. In this pathbreaking and highly illustrated book, Martin Kemp examines the major optically orientated examples of artistic theory and practice from the Renaissance to the nineteenth century. He not only adds to our understanding of a large group of individual works of art but also provides valuable information for all those interested in the interaction between science and art.
