

## The Fun Way to Learn!

Crayons, markers, or colored pencils are the only tools you need to take a walk through the forests of the world, investigate the wonders of the human body, discover the awesome new worlds beyond Earth, and much more!

**Forests** lets you explore the enchanting, wild places we call woodlands: the cloud forests of the tropics; the bamboo forests of China (home of the giant panda); the oak, pine, and holly forests of North America; and more. In each of these lush and peaceful places, you'll discover a fascinating variety of forest plants as well as the animals — birds, insects, and mammals — that eat their leaves and nest in their branches.

**Insects** are the most varied, colorful, and successful animals on Earth. Get a close-up view of their fantastic miniature world through 60 surprising stories and illustrations.

Take a look through insects' many-faceted eyes. Witness the amazing ways they find food and avoid enemies. Learn how they wear their skeletons on the outside. Find out why insects are so important to our forests, deserts, lakes, and plains and how they help humans in unexpected ways.

**Architecture** shows you 5,000 years of amazing designs from tunnels to skyscrapers, from cottages to castles. Visit this world of architectural marvels and learn about the buildings you see every day.

As you read about the 60 landmarks in this book, you'll discover why buildings look the way they do.

**Gray's Anatomy** reveals the incredible structures and workings of the human body. Start with a look at the skeletal system, a light and strong structural frame that's almost one-quarter water. Follow the flow of blood through a network of veins, arteries, and valves; discover how hand muscles can perform delicate movements and yet be so strong; and take a peek at the organs that let you breathe, hear, and turn food into energy.

**Space** visits the most fantastic places in the universe: the swirling clouds of Venus, the strange volcanoes of Io, exploding stars, and hungry black holes. You'll share the discoveries of history's greatest astronomers and find out how today's scientists work to unlock more secrets of the cosmos. Come along — new worlds await!
