ESSENTIAL READING FROM CAMBRIDGE

Superconductivity

The Next Revolution?

Gianfranco Vidali

"...written at a level more detailed and with greater scope than an encyclopedia or Scientific American-style article, more intellectually accessible to interested—but not specialist—readers knowledgeable in physical science than are the professional-level books and articles on the subject. It is this niche that this book has been written to fill, which it does with considerable success."

—**Robert J. Cava, *Nature***
1993 177 pp. 37378-6 Hardcover \$49.95 / 37757-9 Paper \$16.95

And Yet It Moves

Strange Systems and Subtle Questions in Physics

Mark P. Silverman

"...this is a book that is meant to be fun—it's written for those who haven't yet grown out of enjoying intellectual exercise."

—**Brian Pippard, *Nature***
A beautifully written, largely nonmathematical account of the strange behavior of moving particles, fluids, and waves.
1993 283 pp. 39173-3 Hardcover \$49.95 / 44631-7 Paper \$24.95

The Cambridge Encyclopedia of Human Evolution

Edited by **Stephen Jones, Robert D. Martin, and David R. Pilbeam**

"...no better single source that I am aware of for finding brief, accurate, and current synopses of the issues, problems, and methods of analysis within the domain of human evolutionary studies."

—**Robert L. Anemone, *American Journal of Physical Anthropology***
1993 512 pp. 32370-3 Hardcover \$95.00

The Monthly Sky Guide

Third Edition

Ian Ridpath and Wil Tirion

The essential amateur's guide to the night sky and star identification with the naked eye. Newly updated with planet positions for a five-year period from 1993 to 1997.

1993 64 pp. 44865-4 Paper \$14.95

Now in paperback...

Chosen as one of the "Best Books of 1992" by the Editors of The New York Times Book Review

The Ant and the Peacock

Altruism and Sexual Selection from Darwin to Today
Helena Cronin

Part detective story and part philosophical and scientific inquiry, it tells the story of two puzzles in Darwinism—altruism and sexual selection.

Written with passion, eloquence, and a personal touch, Breaking the Maya Code is an adventure in reading about one of the great archaeological sagas of the late twentieth century.

—**Linda Schele, Co-author of
The Blood of Kings and *A Forest of Kings***

Twenty years ago the ruined monuments of Maya civilization were mute, the hieroglyphic inscriptions on magnificent stelae, temples, and palaces largely unread. Today, thanks to an extraordinary scientific breakthrough, these inscribed remains are revealing a history lost to humanity for a millennium. Far from being simple, peace-loving stargazers, they emerge as a much more complex culture: obsessed with warfare, dynastic rivalries, and ritual bloodletting, yet creators of supreme masterpieces in art and architecture.

This is a superbly readable detective story, a challenging and informed account of one of the most exciting intellectual adventures of our age.

"A BIG book about BIG questions — 'Who are we? Where do we come from? Why are we this way and no other? What does it mean to be human?' With all the Sagan/Druyan trademarks — crystal-clear exposition . . . eye-popping anecdotes . . . crack science writing for the masses."

—Kirkus Reviews

World renowned scientist Carl Sagan and acclaimed author Ann Druyan have written a *Roots* for the human species, a lucid and riveting account of how humans got to be the way we are. *Shadows of Forgotten Ancestors* is a thrilling saga that starts with the origin of the Earth. It shows with

humor and drama that many of our key traits — self-awareness, technology, family ties, submission to authority, reason, and ethics — are rooted in the deep past, and illuminated by our kinship with other animals.

Sagan and Druyan conduct a breathtaking journey through space and time, zeroing in on critical turning points in evolutionary history, and tracing the origins of sex, altruism, violence, rape, and dominance. Their book culminates in a stunningly original examination of the connection between primate and human traits. Astonishing in its scope, *Shadows of Forgotten Ancestors* is a triumph of popular science.
