Cataract surgery is one of the world's most common operations *and* one of the most successful. Yet many patients are apprehensive about the prospect of such surgery. In this new edition of *Cataracts*— the first in nearly a decade — Dr. Julius Shulman clearly explains, in nontechnical language, everything a patient needs to know, from how a cataract forms to how to find a good ophthalmologist. Addressing ground-breaking recent advances in diagnosis and treatment, *Cataracts* offers comparisons among all the major kinds of cataract surgery now available. Also included is a discussion of new studies linking cataracts to nutrition. Illustrated with line drawings and printed in large, easy-to-read type, this handbook continues to be indispensable for patients and their families.

Squirrels in the bird feeder, raccoons in the garbage, Canada geese on the lawn, rabbits in the garden, deer in the orchard— during forty years in the suburbs A.B.C. Whipple has coped with them all. *Critters* recounts how the wildlife that was supposed to be banished by suburban development has instead had a population explosion right in everybody's backyard.

Whipple became an amateur naturalist, discovering many fascinating facts of suburban fauna: why the skunk has a white-striped back; why geese and swans fly in V-formation; why squirrels and bats have natural chastity belts; how the southern mockingbird came north along 1-95— not to mention the eighteenth-century squirrels that helped us win our independence from Britain.

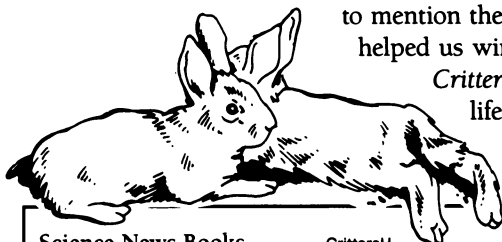

Critters is full of engaging suburban wildlife: gulls bouncing golf balls, Canada geese joining picnics, bats in deadly dogfights, a squirrel that enjoys TV, and a raccoon addicted to Beethoven.

At once a hodgepodge of entertaining birds and animals, *Critters* is also an essential and humorous guide for dealing with the most annoying, endearing, comical, and intelligent suburban critters in our midst. —from *St. Martin's Pr.*

"[An] impassioned wake-up call . . . destined to become the rallying cry of the biodiversity movement. An absolute must read."

John Robbins,
author of *Diet for a New America*

Seeds of Change tells the dramatic story of the growing movement to preserve biodiversity and explains the far-reaching environmental and health consequences for us all if biodiversity continues to erode. Sharing the wonder of growing good healthy food, Kenny Ausubel takes us behind the scenes of the Seeds of Change farm, where hundreds of varieties of our heritage vegetables flourish under the watchful eyes of master gardeners. Ausubel shows us why a bountiful variety of organic food is more than just the basis for healthy living; it is our only hope for the long-term preservation of a vibrant ecology. In celebration of good

eating, **Seeds of Change** includes a dazzling collection of first-rate recipes from leading American chefs Alice Waters, Charlie Trotter, and Mark Miller.
