

# SCIENCE NEWS *makers* from Addison-Wesley

Available through Science News Books, or wherever fine scientific and technical books are sold.

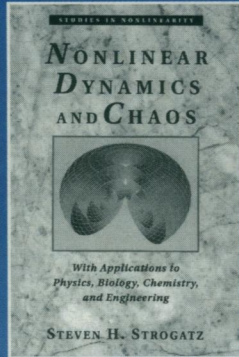

## A Ph.D. Is Not Enough! BY PETER J. FEIBELMAN

"Peter Feibelman's slim book is the next best thing to a real-life mentor, and it deserves a place on every young scientist's bookshelf. Feibelman, a solid-state physicist at Sandia National Laboratories, has worked for twenty years as a scientist and as a manager, and he has seen scores of bright people come and go. His insight into the practice and politics of industrial and university research and his many useful case studies will serve the aspirant well, whatever the field of interest. For one with experience in the field, it is hard to read this book without wondering what might have been had it been available twenty years earlier."

—Laurence A. Marschall,  
in *The Sciences* (May/June 1994)

- Paperback, ©1993 ..... 109 pages  
- 0-201-62663-2 ..... \$12.95

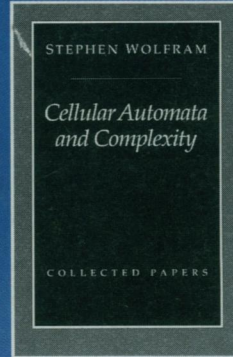

## Nonlinear Dynamics and Chaos BY STEVEN H. STROGATZ

"I thoroughly enjoyed reading *Nonlinear Dynamics and Chaos*: it is an excellent introductory textbook. The book explains even the most difficult concepts in a clear and jargon-free way, without ever sacrificing accuracy. It is chock full of interesting examples and exercises, drawn from a wonderfully wide range of topics, from lovers' triangles to superconducting electronics. Strogatz effectively conveys the interdisciplinary flavor of the subject."

—Prof. Kurt Wiesenfeld,  
Georgia Institute of Technology

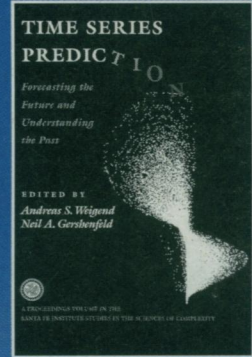

- Hardcover, ©1994 ..... 498 pages  
- 0-201-54344-3 ..... \$55.95

## Cellular Automata and Complexity: Collected Papers BY STEPHEN WOLFRAM

In the early 1980s, Stephen Wolfram made the radical proposal that one should build models of nature that are based directly on simple computer programs. Wolfram made a detailed study of a class of such models known as cellular automata. This book is a collection of Wolfram's original papers on cellular automata and complexity. Some of these papers are widely known in the scientific community; others have never been published before. Together, the papers provide a highly readable account of what has become a major new field of science.

- Paperback, ©1994 ..... 596 pages  
- 0-201-62664-0 ..... \$24.75

## Time Series Prediction: Forecasting the Future and Understanding the Past

BY ANDREAS WEIGEND  
AND NEIL GERSHENFELD

Most observational disciplines, such as physics, biology, and finance, try to infer properties of an unfamiliar system from the analysis of a measured time record of its behavior. There are many mature techniques associated with traditional time series analysis. However, during the last decade, several new and innovative approaches have emerged. This volume presents the results of a careful comparison of different methods for time series prediction and characterization.

- Paperback, ©1993 ..... 643 pages  
- 0-201-62602-0 ..... \$32.25  
- Hardcover, ©1993 ..... 643 pages  
- 0-201-62601-2 ..... \$49.50

## The Early Universe

BY EDWARD W. KOLB  
AND MICHAEL S. TURNER

"The *Early Universe* is a long anticipated guide to the new cosmology that lies at the interface of particle physics and astrophysics. It succeeds in capturing the flavor of this emerging field of research."

—Joseph Silk,  
University of California,  
Berkeley, in *Physics Today*

"The *Early Universe* is an important book, because it provides... the only published means of entry into the new discipline of particle astrophysics."

—William H. Press,  
Harvard-Smithsonian Center for  
Astrophysics, in *Science*

- Paperback, ©1993 ..... 547 pages  
- 0-201-62674-8 ..... \$24.75
