

SCIENCE NEWS®

The Weekly Newsmagazine of Science

Science Service Publication
Volume 146, No. 2, July 9, 1994

Alfred Scott McLaren	Publisher
Patrick Young	Editor
Blair Burns Potter	Managing Editor
Dan Skripkar	Production/Design Director
Greg W. Pearson	Associate Editor
Janet Raloff	Senior Editor Environment/Policy
Ron Cowen	Astronomy
Bruce Bower	Behavioral Sciences
Richard Lipkin	Chemistry/ Materials Science
Richard Monastersky	Earth Sciences
Tina Adler	General Science
Kathy A. Fackelmann, Elizabeth Pennisi	Life Sciences/ Biomedicine
Ivars Peterson	Mathematics/Physics
Larry Norland	Editorial Assistant
Gigi Marino	Science Writer Intern
Cait Anthony	Books/Resource Manager
Donald R. Harless	Advertising/Business Manager

SCIENCE NEWS (ISSN 0036-8423) is published weekly on Saturday, except the last week in December, for \$44.50 for 1 year or \$78.00 for 2 years (foreign postage \$6.00 additional per year) by Science Service, Inc., 1719 N Street, N.W., Washington, DC 20036. Second-class postage paid at Washington, DC, and additional mailing office. **POSTMASTER:** Send address changes to SCIENCE NEWS, P.O. Box 1925, Marion, OH 43305. Change of address: Four to six weeks' notice is required — old and new addresses, including zip codes, must be provided.

Improving acupuncture studies

Why is it that no one ever uses a control group when studying the results of acupuncture ("Acupuncture gives knees a lift," SN: 5/14/94, p.319)?

I believe it would be instructive to have two groups of acupuncture patients, one treated with the needles in the correct locations for a particular problem and one treated with needles in the wrong locations. It might be a better way of controlling for the placebo effect of the needles.

Steven M. Denenberg
Omaha, Neb.

From the realm of ideal solutions

Your article "Opening a Quantum Door on Computing" (SN: 5/14/94, p.308), in which it is suggested that a "quantum computer" could factor 100-digit numbers by simultaneously considering all smaller numbers as possible factors, brings to mind two other solu-

This Week

- 20 Monkeys Defy Crowding-Aggression Link
- 20 Fine-tuning gene action in engineered mice
- 21 Setting odds on extremity defects after CVS
- 21 Detecting helium in the early universe
- 22 Heavy lead found in some French red wine
- 22 Greenery filters PAH-lution from skies
- 22 CO₂ increase boosts methane emissions

Research Notes

- 30 Biomedicine
- 30 Science & Society

Articles

- 24 Growing Up Poor
- 26 The 200,000-Megaton Meeting

Cover: For 6 days beginning July 16, fragment of Comet Shoemaker-Levy 9 will plow one by one into Jupiter. This artist's rendering shows the comet string as viewed from beneath Jupiter's south pole. Virtually every major telescope on Earth and several in space will be trained on Jupiter during the event.

Science Service, which publishes SCIENCE NEWS, is a nonprofit corporation founded in 1921. It gratefully accepts tax-deductible contributions and bequests to assist its efforts to increase the public understanding of science, with special emphasis on young people. More recently, it has included in its mission increasing scientific literacy among members of underrepresented groups. Through its Youth Programs it administers the International Science and Engineering Fair, the Science Talent Search for the Westinghouse Science Scholarships, and publishes and distributes the *Directory of Student Science Training Programs for Precollege Students*.

Board of Trustees — *Chairman*, Glenn T. Seaborg; *Vice Chairman*, Gerald F. Tape; *Secretary*, David A. Goslin; *Treasurer*, Willis Harlow Shapley; Joseph W. Berg Jr.; Robert W. Fri; J. David Hann; Dudley Herschbach; Shirley M. Malcom; Elena O. Nightingale; Ben Patrusky; Peter H. Raven; H. Guyford Stever; Sanford J. Ungar; Deborah P. Wolfe. **Honorary Trustees** — Edward Bliss Jr.; Bowen C. Dees; O. W. Riegel; John Troan.
President: Alfred Scott McLaren; **Vice President and Business Manager**: Donald R. Harless.

tions to problems.

Hilbert's Hotel, in which there is a room for each positive integer (1,2,3...), can solve the overbooking problem even if every room is full. Just send a new arrival to room 1, tell the person there to move to room 2, tell the person there to move to room 3...

The recipe for lion and rabbit stew: Take a lion...

Is the quantum computer any closer to reality?

Mark Finkelstein
Associate Professor of Mathematics

Irvine, Calif.

Enlightening points

As a geologist who uses polarized-light microscopy in both teaching and research, I would like to clarify two points ("Images of Inner Space," SN: 5/21/94, p.328).

First, although many optical microscopists use microscopes without polarizers, the standard petrographic microscope used by geolo-

gists to investigate thin sections of rock has a pair of polarizers. Thus, we are privy on a routine basis to extraordinarily colored images like those shown in your article.

Second, even if a material is irradiated with light that is *not* polarized, the material may act as a prism. It is not the prism (diffraction) effect that gives rise to the colors seen under the microscope when its polarizers are crossed, but an interference effect. This effect arises in materials that have different optical properties, including how rapidly they propagate light, in different directions.

Jill Dill Pasteris
Professor of Earth and Planetary Sciences
Washington University
St. Louis, Mo.
