Combining the fun of making a piece of paper fly with the science of aeronautical engineering, here is an all-you-need (and then some) book for beginners and experienced flyers alike. Written with soaring enthusiasm, it includes:

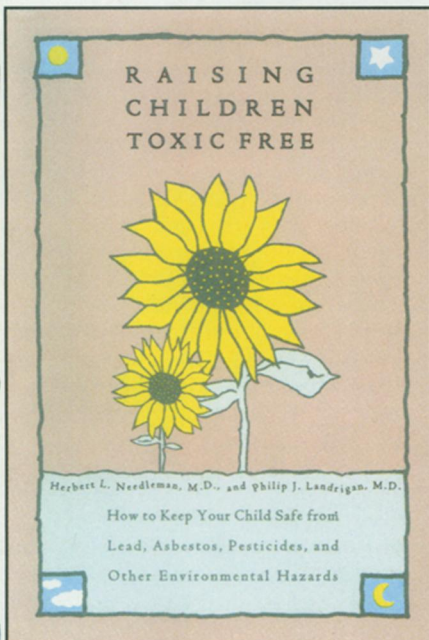

- ▲ 16 different designs, from the basic dart to a biplane and a replica of the NASA Space Shuttle
- ▲ 100 full-color ready-to-fold airplanes
- ▲ A primer on the principles of flight, including weight vs. lift, drag vs. thrust, and adjustments for greater stability
- ▲ The all-important throw — learn to match throwing technique with the right model
- ▲ Aerobatics: how to perform circles, loops, dives, and other stunts
- ▲ Competitive flying
- ▲ *Plus a tear-out Runway and custom Flight Log.*

It's everything you need to top the record of 18.80 seconds. If you dare.

Children are much more vulnerable to the dangers of pollution than are adults. They are more easily affected, and the damage to their bodies tends to be more serious. With *Raising Children Toxic Free*, two experts on environmental diseases offer the first guide for parents and physicians on how to realistically control the threat to children's health from pollution. They define the critical pollutants in today's environment, from asbestos and lead to radon and involuntary smoke, and they offer practical advice on how to reduce their effects at home and in the larger environment, including schools and playgrounds. Most parents and even most physicians tend to be more concerned than well informed about pollutants. This important book will empower both groups to make the environment safe for today's and tomorrow's children.

—from Farrar, Straus and Giroux

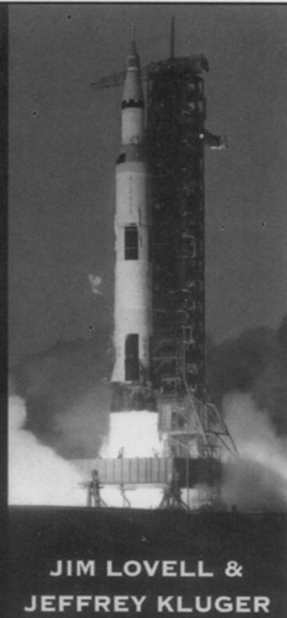

In April 1970, NASA sent Navy Captain Jim Lovell and two other astronauts on America's fifth mission to the moon. Only fifty-five hours into the flight of Apollo 13, disaster struck: a mysterious explosion rocked the ship.

The full story of the moon shot that almost ended in catastrophe has never been told, but now Lovell and coauthor Jeffrey Kluger bring it to vivid life. What begins as a smooth flight is transformed into a hair-raising voyage. Minutes after the explosion, the astronauts are forced to move into the lunar module, a tiny craft designed to keep two men alive for just two days.

As the hours tick away, the narrative shifts from the crippled spacecraft to Mission Control, to Lovell's wife and children. The entire nation watches as one crisis after another is met and overcome. By the time the ship splashes down in the Pacific, we understand why the heroic effort to rescue Lovell and his crew is considered by many to be NASA's finest hour.

Hip, multicultural, and funny, THE CARTOON HISTORY OF THE UNIVERSE I and II has something for absolutely everyone. Both enormously edifying and wildly entertaining, it's a course in history that's in a class by itself.

The first edition traverses 13 billion years of history from "The Evolution of Everything" to "Brains and Bronze" to "All About Athens."

The brand-new second edition contains six more hilarious volumes, which pick up from where the last book leaves off and continues through 600 A.D. Some volumes included here are "Is Everything Sacred? —the story of ancient India," "Jaded Princes — Chin and Han Dynasties," and "Render Unto Caesar."
