Henry David Thoreau once observed "Many men go fishing all their lives without knowing that it is not fish they are after." In his new book, *Pavlov's Trout: The Incomplete Psychology of Everyday Fishing*, psychologist and outdoor writer Paul Quinnett takes an entertaining and illuminating look at just what it is people go fishing for. And, as Quinnett relates, the fish landed is indeed secondary to the challenge, optimism, excitement and freedom which the pursuit embodies. "It is better to fish hopefully than to catch fish," he observes. "Some young anglers might disagree, but no old fisherman would. Fishing is hope experienced."

But *Pavlov's Trout* is far more than a paean to the joys of fishing. It is the first real exploration of psychology of fishing, and Quinnett examines the mysteries of the sport through the microscope of modern psychology. Various chapters explain such phenomena as what motivates fishermen, why some fishermen seem compelled to lie about their catch, "fishaholism," why fishermen spit on their bait, and how any innocent child can be positively addicted to a sport with so many rewards. Written with humor and insight, *Pavlov's Trout* is a delightful and informative book for anyone who enjoys fishing — or merely wonders at the primal pleasure of the sport.

From ancient times to the present, from philosophers to quantum physicists, nothing has so perplexed, so fascinated, so captivated the mind as the elusive nature of light. In *Catching the Light*, Arthur Zajonc takes us on an epic journey into history, tracing how humans have endeavored to understand the phenomenon of light. Blending mythology, religion, science, literature, and painting, he reveals in poetic detail the human struggle to identify the vital connection between the outer light of nature and the inner light of the human spirit. Zajonc looks at our contemporary world, in which science plays the greatest part in our theories of light's origin—from scientific perspectives such as Sir Isaac Newton's "corpuscular theory of light" to such revolutionary ideas as Albert Einstein's "theory of relativity" and Niels Bohr's "quantum jumps."

A fascinating search into our deepest scientific mystery, *Catching the Light* is a brilliant synthesis that will both entertain and inform.
