

Earth From the Inside Up

ISLANDS is a celebration of the diversity of the world's islands by renowned authorities and exquisite nature photographers. In stunning photography and illuminating text, **ISLANDS** takes a comprehensive look at islands of the world—from the continental-size Greenland to the volcanic and ever-changing islands of Hawaii to islands that are mere dots on a map. This book discusses the origin of islands; looks at the life-forms that live on and sometimes depart from islands ecosystems; and explores the role islands play in human history and culture.

MOUNTAINS is a comprehensive look at the grandeur of mountains and a call to preserve them by 16 world-renowned experts. **MOUNTAINS** not only celebrates the diversity and beauty of mountains, which cover a fifth of the earth's terrestrial surface, but it calls attention to these threatened environments and the need to protect them. From the snow-covered alps to tropical mountains, learn about how mountains are formed as a result of volcanoes or shifting continental plates; the unique flora and fauna (including exotic plants, a magnificent array of animal species, and people) that have adapted to mountain habitats; and the impact of humans on mountains.

No less than 70 percent of the earth's surface is covered by vast oceans that contain some of the most bizarre known life-forms. Our planet's marine environment is unique, but only now are we beginning to understand the intriguing forces that make it work. **OCEANS** explores the origins of these vast expanses of water and explains the mysteries of their waves, tides, and currents. It also describes the diversity of oceanic life-forms from majestic whales to minuscule plankton and gives an overview of the human impact on this environment—from the earliest known voyages to today's sophisticated deep-sea soundings.
