

SCIENCE NEWS®

The Weekly Newsmagazine of Science

Science Service Publication
Volume 148, No. 2, July 8, 1995

Alfred Scott McLaren	Publisher
Blair Burns Potter	Interim Editor
Dan Skripkar	Production/Design Director
David Lindley	Associate Editor
Janet Raloff	Senior Editor
Ron Cowen	Environment/Policy
Bruce Bower	Astronomy
Richard Lipkin	Behavioral Sciences
Richard Monastersky	Chemistry/Materials Science
John Travis	Earth Sciences
Kathleen Fackelmann,	Biology
Lisa Seachrist	Biomedicine
Tina Adler	Life Sciences
Ivars Peterson	Mathematics/Physics
Damaris Christensen	Editorial Assistant
Corinna Wu	Science Writer Intern
Cait Anthony	Books/Resource Manager
Donald R. Harless	Advertising/Business Manager

SCIENCE NEWS (ISSN 0036-8423) is published weekly on Saturday, except the last week in December, for \$49.50 for 1 year or \$88.00 for 2 years (foreign postage \$6.00 additional per year) by Science Service, Inc., 1719 N Street, N.W., Washington, D.C. 20036. Second-class postage paid at Washington, D.C., and additional mailing office. **POSTMASTER:** Send address changes to SCIENCE NEWS, P.O. Box 1925, Marion, Ohio 43305. Change of address: Four to six weeks' notice is required — old and new addresses, including zip codes, must be provided. Copyright © 1995 by Science Service, Inc. Title registered as trademark U.S. and Canadian Patent Offices. Printed in U.S.A. on recycled paper. ♻️ Reproduction of any portion of SCIENCE NEWS without written permission of the publisher is prohibited.

Editorial and Business Offices:

For customer service, call 1-800-347-6969.

This Week

- 20 Brain Data Fuel Alcoholism Gene Clash
- 20 DNA repair enzyme: A structure revealed
- 21 Slowing down the evolution of tough insects
- 21 Spinning nuclei to extreme deformity
- 22 Microscopic diamonds crack geologic mold
- 22 Carbide whiskers shrink to nanometer size
- 23 Diet, exercise, genes strengthen bones
- 23 Gene for early, aggressive Alzheimer's

Research Notes

- 31 Biology
- 31 Biomedicine

Articles

- 24 Tissue Engineering
- 28 The Ediacaran Enigma

Cover: After remaining microscopic for billions of years, life suddenly broke the size barrier between 650 and 540 million years ago, producing this *Dickinsonia costata* and a host of other organisms. Collectively known as the Ediacaran fossils, these impressions were originally classified as the earliest animals. Now, some researchers question whether the organisms were animals at all. Departments

- 18 Books
- 19 Letters

Science Service, which publishes SCIENCE NEWS, is a nonprofit corporation founded in 1921. It gratefully accepts tax-deductible contributions and bequests to assist its efforts to increase the public understanding of science, with special emphasis on young people. More recently, it has included in its mission increasing scientific literacy among members of underrepresented groups. Through its Youth Programs it administers the International Science and Engineering Fair, the Science Talent Search for the Westinghouse Science Scholarships, and publishes and distributes the *Directory of Student Science Training Programs for Precollege Students*.

Board of Trustees — *Chairman*, Dudley Herschbach; *Vice Chairman*, Gerald F. Tape; *Secretary*, David A. Goslin; *Treasurer*, Willis Harlow Shapley; Joseph W. Berg Jr.; Robert W. Fri; J. David Hann; Shirley M. Malcom; Elena O. Nightingale; Ben Patrusky; Peter H. Raven; H. Guyford Stever; Sanford J. Ungar; Deborah P. Wolfe. **Honorary Trustees** — *Chairman Emeritus*, Glenn T. Seaborg; Edward Bliss Jr.; Bowen C. Dees; O.W. Riegel; John Troan.

President: Alfred Scott McLaren; **Vice President and Business Manager:** Donald R. Harless.

Criminal choices

In regard to "Criminal Intellects" (SN: 4/15/95, p.232), researchers Moffitt, Block, and Pennington provide valuable (though disparate) insights into the origins of delinquency. Indeed, an inclination to commit crimes results from a combination of many elements—including environmental factors, early socialization, personality traits such as impulsiveness, and to some extent, biology.

The bottom line, however, is that criminality is a conscious choice made on an individual basis, irrespective of intelligence or environment. After all, there are many people who are low in IQ but high in probity, as there are many people who live in poverty yet are rich in morality. If not for the element of conscious choice, how could researchers explain why I—a member of Mensa with an upper-middle-class background—am serving a 20-year sentence for committing an armed robbery?

Taking responsibility for the consequences of one's choices should be an integral part of understanding, and curbing, criminal behavior.

Alex Friedmann
Clifton, Tenn.

With regard to the comment that while the average IQ has not declined in the last 30 years, the crime rate has, it seems to me that perhaps what has changed is what one might call relative IQ. As the technical aspects of the average employment have increased, the IQ necessary for productive employment has also increased. Thus more and more individuals in the lower IQ range have been forced out of the job market even though their IQs have not declined.

It seems to me that this is a long-range problem that can only get worse and can only lead to frustration on the part of those affected. For my part, I can see no easy solution.

Samuel B. Knapp
Silverdale, Wash

More than one way to save a bird

"Think big to save birds on the edge" (SN: 4/1/95, p.198) leads one to believe that larger old-growth forests are the only hope for neotropical bird survival. We here in central Texas have been faced with the serious problem of nest parasitization of our neotropical birds (the caped vireo and golden-cheeked warbler) by cowbirds. The Kerr Wildlife Management Area has been able to increase its population of these endangered species by controlling the cowbird population.

The hard-working biologists in Kerrville have thus provided a valuable demonstration of how to recover and increase a rare and valuable natural resource in an agricultural area.

Ken Shilkun
Fredericksburg, Texas
