

Get Up Close to the Birds with Audubon Videos

At peril for a century, bluebirds are coming back! Across North America devotees are determined to save these birds and the outlook is bright. This videocassette is your invitation from the National Audubon Society to share in this uniquely American conservation success. Watch and listen as all three of our native bluebirds—eastern, western, and mountain bluebirds—reveal their intimate family stories. Thrill to the song and color that radiates from bluebirds alone. Best of all, learn in *Bluebirds Up*

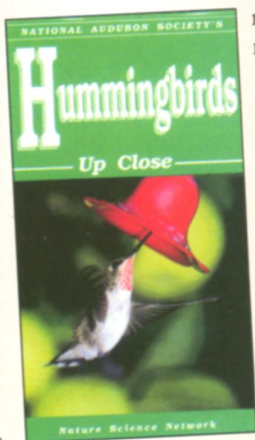

Close how to attract and care for your bluebirds—wherever you live in the U.S.A.

We lavish tons of sunflower seed on the northern cardinal—official emblem of seven states, vicar of countless backyards—yet do we really know this fiery bird? Did you know that a century ago the northern cardinal was decidedly southern? That the blind and naked young heed their father's voice commands, then feast and fly from the nest a mere eight days out of the egg? This videocassette is the first in-depth exploration of the private life of the cardinal—and your personal invitation to view up close the bird that, more than any other, has led us to love nature.

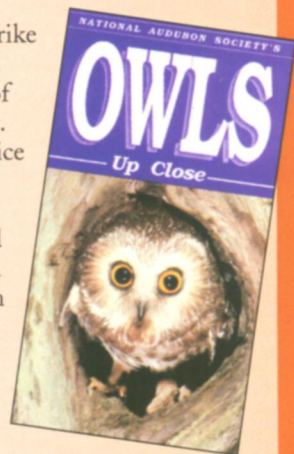

The fastest creature that ever lived is a hawk—the peregrine falcon—and it's still flying today, in some of America's biggest cities. In fact, ever since the first humans looked skyward, it's likely we've been inspired by these majestic birds to dream of flight. Spend 55 fascinating minutes with the 30 species of hawks with whom we share our North American continent. Watch them strike their prey, court their mates, and raise their families, and meet them in the thousands at their migration funnelling points

in *Hawks Up Close*.

Lightning-fast and blazing with iridescence, hummingbirds brighten our summers. This videocassette is your guide to enjoying all 15 species north of the Rio Grande. You'll see male hummingbirds in dazzling courtship flight, females tending their delicate nests and slow-motion sequences of the tiny birds catching insects in midair. Best of all, this video shows you how to bring these exciting birds to your home with flowers and feeders.

Did you know that owls have 3-dimensional hearing? That they can detect a mouse under two feet of snow and strike prey in total darkness? Much is known about these amazing birds, but much of their power is still a mystery to science. With this engaging video you can rejoice in all 18 species of the wide-ranging North American owls. Share in the mysteries of the mighty great horned owl, the elf owl—barely larger than a hummingbird—and all sizes between as they fly, hunt, court, raise their families, and provide some special relationships with humans.

Each video is in VHS format and plays for 50 to 55 minutes.
