

SCIENCE NEWS®

The Weekly Newsmagazine of Science

Science Service Publication
Volume 148, No. 24, December 9, 1995

Alfred Scott McLaren	Publisher
Julie Ann Miller	Editor
Blair Burns Potter	Managing Editor
Dan Skripkar	Production/Design Director
David Lindley	Associate Editor
Janet Raloff	Senior Editor Environment/Policy
Ron Cowen	Astronomy
Bruce Bower	Behavioral Sciences
Richard Lipkin	Chemistry/ Materials Science
Richard Monastersky	Earth Sciences
John Travis	Biology
Kathleen Fackelmann, Lisa Seachrist	Biomedicine
Tina Adler	Life Sciences
Ivars Peterson	Mathematics/Physics
Damaris Christensen	Editorial Assistant
Marjorie Centofanti	Science Writer Intern
Cait Anthony	Books/Resource Manager
Donald R. Harless	Advertising/Business Manager

SCIENCE NEWS (ISSN 0036-8423) is published weekly on Saturday, except the last week in December, for \$49.50 for 1 year or \$88.00 for 2 years (foreign postage \$6.00 additional per year) by Science Service, Inc., 1719 N Street, N.W., Washington, D.C. 20036. Second-class postage paid at Washington, D.C., and additional mailing office. **POSTMASTER:** Send address changes to SCIENCE NEWS, P.O. Box 1925, Marion, Ohio 43305. Change of address: Four to six weeks' notice is required — old and new addresses, including zip codes, must be provided. Copyright © 1995 by Science Service, Inc. Title registered as trademark U.S. and Canadian Patent Offices. Printed in U.S.A. on recycled paper. ♻️
Republication of any portion of SCIENCE NEWS without written permission of the publisher is prohibited.

For new subscriptions only, call 1-800-247-2160.
For customer service, call 1-800-347-6969.

This Week

- 388 Body's Proteins Suppress AIDS Virus
- 388 DNA tests identify hoatzin's cousins
- 389 Disorder to nudge order out of chaos
- 389 First portrait of a brown dwarf
- 389 U.N. treaty to aid 'international' fish
- 390 CIA studies fan debate over psi abilities
- 390 Hormone triggers cells to turn to fat
- 391 Viruses can move: Tale of a telltale tail
- 391 Tamoxifen use limited
- 391 Researchers access secret seismic data

Research Notes

- 397 Astronomy
- 397 Materials Science
- 399 Biology
- 399 Biomedicine

Articles

- 392 **Vegemania**
Cover: Saponins, a family of compounds native to many plants, show an impressive array of health benefits when consumed in fruits and vegetables. The cover photo shows the saponin-rich plant *Siraitia grosvenorii*, used by Chinese chefs to sweeten food. (Illustration courtesy of A. Douglas Kinghorn/University of Illinois at Chicago)
- 394 **Testing Genes**

Departments

- 387 Letters
- 396 Books

Science Service, which publishes SCIENCE NEWS, is a nonprofit corporation founded in 1921. It gratefully accepts tax-deductible contributions and bequests to assist its efforts to increase the public understanding of science, with special emphasis on young people. More recently, it has included in its mission increasing scientific literacy among members of underrepresented groups. Through its Youth Programs it administers the International Science and Engineering Fair, the Science Talent Search for the Westinghouse Science Scholarships, and publishes and distributes the *Directory of Student Science Training Programs for Precollege Students*.

Board of Trustees — *Chairman*, Dudley Herschbach; *Vice Chairman*, Gerald F. Tape; *Secretary*, David A. Goslin; *Treasurer*, Willis Harlow Shapley; Joseph W. Berg Jr.; Robert W. Fri; J. David Hann; Shirley M. Malcom; C. Bradley Moore, Elena O. Nightingale; Ben Patrusky; Peter H. Raven; H. Guyford Stever; Sanford J. Ungar; Deborah P. Wolfe. *Honorary Trustees* — *Chairman Emeritus*, Glenn T. Seaborg; Edward Bliss Jr.; Bowen C. Dees; O.W. Riegel; John Troan.

President: Alfred Scott McLaren; *Vice President and Business Manager*: Donald R. Harless.

Letters

Shedding more light on rhythms

"Lighting up Biological Clocks" (SN: 8/12/95, p.108) says that Woodland Hastings in 1958 found a circadian rhythm in *Gonyaulax polyedra*. Beatrice Sweeney had already published this observation in 1955. After hearing Sweeney present this work, Hastings came to work in her lab on her cultures of *Gonyaulax*.

Helen G. Hansma
Associate Research Biologist
Barbara Prezelin
Professor of Biology
University of California
Santa Barbara, Calif.

In 1955, Sweeney reported a circadian rhythm in the algae in darkness, but the rhythm died out. In 1958, Hastings reported that the algae maintained a rhythm indefinitely under constant dim light—not constant darkness, as the article states.
— J. Travis

River ridges

I have puzzled over such phenomena as sand ridge creation ("Off the Beach," SN: 8/19/95, p.120) myself as I've traveled about as a yacht captain.

The bottom of the Columbia River near Portland, Ore., has the same sort of surface. Most yachts nowadays are equipped with color depth sounders which have a scrolling display, showing the past minute or two of bottom contour. Although the river is only 25 to 40 feet deep, the bottom contour appears as a dramatic sawtooth shape with very regular peak-to-peak intervals and a difference of as much as 4 feet from peak to valley. This condition occurs in various places in the river but especially from the Interstate 205 bridge westward about 5 miles.

If the source of this effect is essentially the same as the ocean shore ridges, which are wider apart, it might serve as a test bed for investigation. The river flow speed and depth vary seasonally, so if the bottom is

soft, the peak heights and spacing might also vary seasonally.

Gravitational causes of clusters?

"Speeding into coordinated movement" (SN: 8/19/95, p.117) made me wonder if this could explain galactic clusters and other nonuniform mass distributions in space. The sentence "every particle assumes the average direction of motion of the particles in its immediate neighborhood, modified by a small, random perturbation" sounds a lot like gravitational effects on a mass in space exerted by other, nearby masses.

The young universe would resemble the high-noise, high-density illustration in the article and would evolve to resemble the low-noise, low-density illustration. The clumps shown look a lot like galactic clusters.
