Whether you're bewildered by the vast number of organisms inhabiting our planet or just crave a clear and comprehensive explanation of the endoplasmic reticulum, *Instant Biology* will guide you through the science that brings the very act of living (and dying) to life.

From an enlightening walk down the double helix stairway to a look at Darwin's evolutionary musings on the diversity of existence, *Instant Biology* lays bare the facts of life.

With *Instant Biology* you'll learn:

- ▶ everything you always wanted to know about sex and the single cell
- ▶ how the fuzzy pizza crust under the bed is diligently working its way to the top of the food chain
- ▶ how a species of soil and pond dwellers can dry out, shrivel up, then return from the dead

Instant Biology is crammed with special features, including chapter summaries, biographical and historical tidbits, and many illustrations and diagrams. —from Fawcett Columbine

Tony Rothman explains in clear prose the inner workings of Newton's apple and Maxwell's electromagnetic waves and simultaneously offers wry observations about the state of physics in the world today. With *Instant Physics* you'll learn:

- ▶ why gravity is a "romantic" force
- ▶ enough of Einstein's theories of relativity to discuss knowingly the derivation of $E=mc^2$
- ▶ how to tell the difference between a gluon, a meson, and a quark, even if you can't see them

Instant Physics is crammed with special features, including who's who lists, biographical and historical tidbits, and a host of illustrations, photos, equations, diagrams, and drawings.

Most children fall into one of five basic personality types that stem from inborn physical characteristics: the sensitive child, the self-absorbed child, the defiant child, the inattentive child, and the active/aggressive child. Stanley Greenspan, M.D., is the first to show parents how to match their parenting to the challenges of their

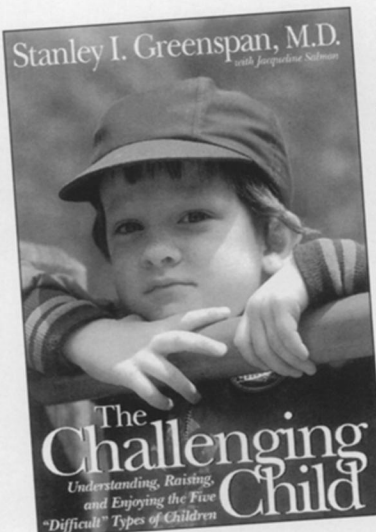

particular child. He identifies and vividly describes these five universal temperaments and then, with great empathy, shows parents how each of these children actually experiences the world and how to use daily childrearing to enhance an individual child's strengths and talents.

A profoundly optimistic book, *The Challenging Child* reassures parents that they do not have simply to "live with" or adjust to their child's temperament, but that by creating new parenting patterns based on the child's characteristics, they can help the child overcome behavioral problems and develop his or her emotional and intellectual capacities to the fullest. Parents will learn how to spot personality differences in the earliest years, and also how to build relationships that nourish growth from the start.
